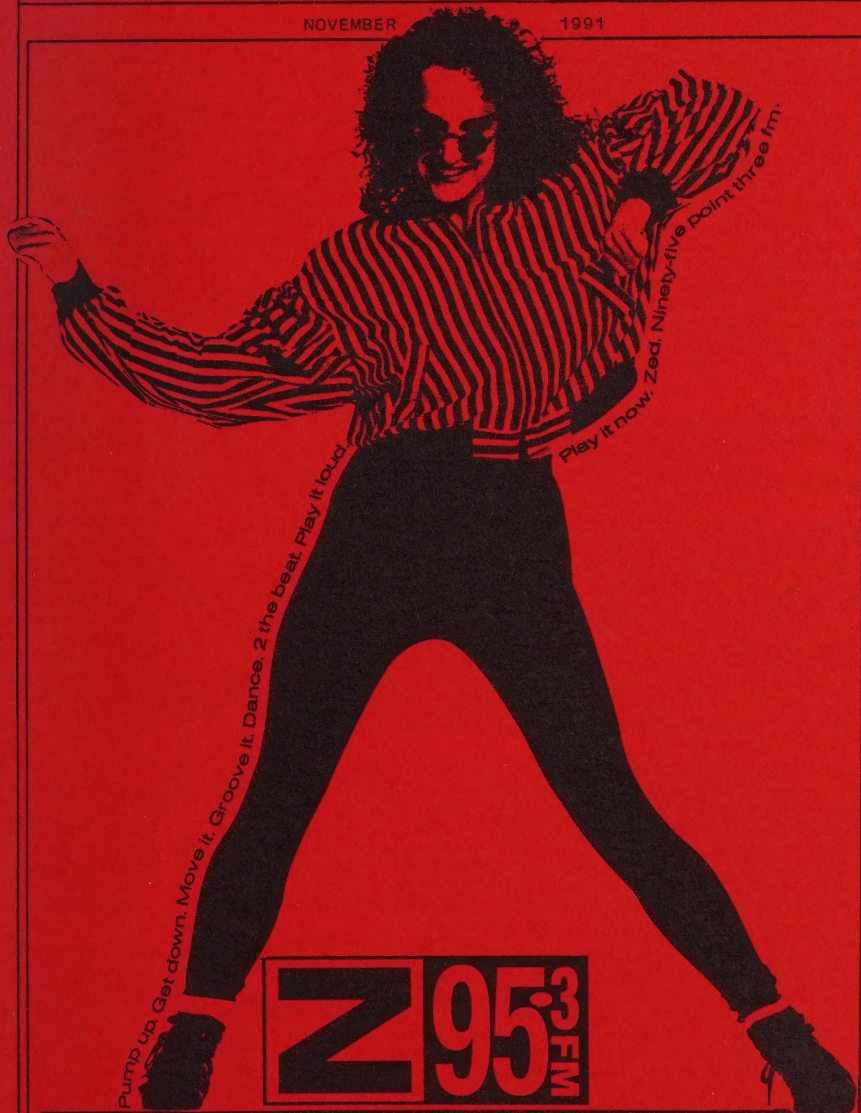
NOVEMBER 1991



SPECIAL REPORT

YOUR RIGHTS TO DX THE PSB BANDS MIGHT BE DENIED!

There have been several developments that has not been covered by the WTFDA, but have been bought to light elsewhere. Namely your rights to DX and just plain monitor the PSB bands....

As most of you know, several states ban the monitoring of Police/Fire frequencies in motor vehicles. My state, New Jersey..is one of these states. Our law, is said to be on the 'books' since the 1930's!, is so strict that unless you are a police officer, fireperson, or emergency (EMS) technitian or a goverment (Federal) law enforcement officer. You are not allowed to have a scanner in your motor vehicle. Even,if you, have the scanner shutoff and locked in your trunk! The penalties include a $500.oo fine, confiscation of your scanner and get this..up to a 18 month jail term! Ham radio operators are not exempt, currently a Ham in Union County (NJ) is facing a 18 month jail term for violating this law! Just having a radio capable of recieving the PSB bands in your car, even in the trunk, subjects you to this fine and possible imprisonment!

Fortunatley, the ARRL (American Radio Relay League), ANARC, NESN (North East Scanning News) a Northeast scanning club and Frank Terranella, a lawyer who is working with both ANARC and the ARRL along with NESN's large membership has been able to introduce a bill in the NJ Legislature, and word has it that this bill might be voted on / signed into law REPEALING New Jersey's 'mobile scanner law'. And also there is some talk that the Ham who is facing the possibility of jail sentence for having a scanner in his car, might perhaps have the law tested as unconstitutional as the law is vague and overly broad. Well that is the good news!

Now the bad news!

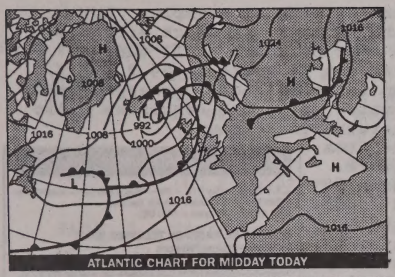
In the Newark Star Ledger on October 6th 1991 Sunday edition had a very interesting article on the NJ Scanner law and went on about the Ham operator and his plight. The article went on to talk about 'the controversey' on scanners and the like.....it also went on to say..that.

JERSEY CITY NEW JERSEY IS CONSIDERING BANNING POSSESION OF SCANNERS IN THE PRIVACY OF ONES HOME!!!!! This my friends,is very scary! A council member in Jersey City (and other communities) are considering a ordinance(s) to deny your right to listen in the privacy of our own homes to listen & DX on your scanner. What happens in Jersey City NJ (and other communties) will likely have a effect on you somewhere in the future! I understand that Jersey City Police have complained to the lawmakers in JC that the criminals are using scanners and that they (the Police) want a total ban on scanners in JC. If they ban scanners in JC, they then might go after all radios that 'tune' the PSB bands. The ICOM R-7000 comes to mind along with the various Ham gear that incidently receive some PSB bands as mostly all Ham gear do.

Am I jumping the gun here, so to speak? Think about it. If what happens in Jersey City goes through, then it will be a short time before it also happens in other towns, cities,perhaps your own community? Kiss enjoyable monitoring goodbye! Of course there will be a fight over all this, several things come to mind. Your rights as taxpayer to monitor the goings on in the community, your rights against censoring important information, the right to know and several things that go against your rights. I also understand that Frank Terranella and NESN is looking into this misguided effort by the Jersey City law makers.

In other things that approach this subject of banning, restricting and further hampering the radio hobby. In a editorial in the most recent issue of "Monitoring Times". Bob Grove (the publisher) wrote about the FCC proposing to deny type acceptance of scanners capable of receiving cellular bands and even scanners easily modified to receive the cellular bands even though the scanner is locked out from cellular. According to the article no one in Washington DC is opposing the bill. And if this goes through then possibility of the FCC proposing to remove the PSB bands is not far off. Watch for future updates on this. For more information on the NESN write to North East Scanning News 212 West Broad St Paulsboro NJ 08066. Sample issues of NESN are available for $2.50.

--Bill Nienajadly



ATLANTIC CHART FOR MIDDAY TODAY

A TECHNICAL TOPICS DX REPORT

Your technical editor, Tim McVey, has taken up residence in England for the next three years. During this time, I'd like to make an attempt to put the "W" into WTFDA...from time to time I hope to be able to submit DX reports, antenna reviews, etc. to give a general feel for what DX'ing is like in Europe.

My wife and I got our home set up in July, and got my antennas up! The C.M. Stereo Probe Nine is up at 20' AG on a rotor, and the jazzed-up Pioneer TX-7500 is ready for action. (The lousy front-to-back ratio of the Probe 9 is OK here because I have the Pennines to the west and the N. York Moors to the north!) We live in Knaresboro, a market town that goes back to the 12th century, complete with old castle ruins, medieval homes and churches, and a town crier. It's located about 25 miles NE of Leeds, and about 200 miles N of London. This is the beautiful countryside of sheep, James Herriot, Beatrix Potter, and lovely heather-topped moors, any of which would make a fine site for a DXpedition.

The FM dial here is relatively quiet; the locals have low power. There are only 4 watchable TV stations, and they are all on UHF and require an outdoor antenna. We're about 50 miles inland from the North Sea and on the eastern slope of the Pennine Mountains, so the tropo paths from the continent have good potential, as we shall see.

American DX'ing habits are little help here. Only in USA, Canada, Mexico, parts of Latin America, and Australia will you hear stations ID regularly with call letters. In Europe, at least, networks are the rule, and these are identified by name only rather than by any technical details. In England, "BBC Radio 2" operates in the 88-90 MHz range. No frequencies or locations or calls are given. The primary goal of the BBC is to make sure a person can clearly receive the "Radio 2" programme, no matter where he/she/it goes within the UK. To this end, a network of primary (10kW and up) and relay (5 to 5000 Watts ERP) stations are strategically located about the land. Listeners are informed merely to tune to the strongest available signal in the range 88-90 MHz "band."

When DX'ing, one must use external clues to "assemble nets." On FM, unlike SW, broadcasters don't broadcast in English unless their community speaks it! (By the way, FM is often called VHF to distinguish it from the other broadcast bands, LW and MW.) It is vitally important to become intimately familiar with all your locals so that any unusual stuff gets recognized quickly. One also must have good listings of networks, such as is given in the World Radio-TV Handbook.

When something unusual comes rolling in, it helps to have a directional antenna to find the strongest direction (a peak in signal strength usually falls within 10 degrees or so on a large yagi) and to make sure the German is really coming from the direction of Germany.

Then, one should always tune up and down the dial to see at what other frequencies the identical programme shows up. This is extremely important, for it gives you all the technical details you're looking for, even if unable to speak the language. Check the frequencies you are hearing against your listings, and there should be a match that shows up somewhere. Once you've found that, use the listing to hunt for other targets that may be buried more in the noise and QRM.

This process is perhaps best illustrated with an example. Let's say I'm hearing Dutch programs on the FM band. A check with the rotor peaks it in a direction a bit S of Holland. I'll tune across the dial, and the same program can be heard at 94.2, 95.7, and 99.9. Two of the three match up to Nederlandse Omroepprogramma Stichting's network, but all three match up to the Belgische Radio en Televisie (BRT) Dutch language network in Belgium. Now, use the listing (reprinted here from the WRTH) to piece together the network. The cool thing about national networks is that the same transmitter sites and equipment is usually used to transmit other programmes. In this example, I notice that the 95.7 signal on my radio shows up at S-3.2 on my tuner's S-meter. The list shows other programs on 98.6, 90.4, and 102.1. I tune to 98.6, and, sure enough, there's another Dutch program, also at S-3.2. I try for 97.9 and 97.5, but there are locals on those channels. However, a check on 93.7 shows a Dutch signal parallel to 98.6, but weak and fluttery. Just to check, I tune to 91.7 and there is a Dutch program, identical to the first three frequencies (94.2, 95.7, 99.9 MHz) but fluttery and at the same weak signal level as at 89.5. This process is called assembling a net, and ensures that you are really hearing the DX you think you are, even without understanding the language. And don't overlook the possibility of parallel broadcasts on LW frequencies, as well. During the day, groundwaves at LW can easily go farther than VHF through a tropo duct.

ENGLAND'S RADIO DIAL

In the UK, there are two broadcasting organisations: the famous BBC, and the Independent Radio Authority. The BBC (British Broadcasting Corporation) is non-commercial and supported by direct taxing of its listeners. If you live in the UK, and your TV or radio is capable of receiving the BBC signals, you must buy a license. This costs £77 per year (about $125 when I bought mine) per household, for color TV. (There are discounts for using B&W TV set only, or if you're blind.) The RA regulates independent, commercial broadcasters, which may apply for and set up a station if an allocation exists for that area. (Not unlike the FCC.) BBC provides three TV channels (in stereo, with Ceefax subcarriers), and 5 domestic radio programmes, as well as national, native-language programs for Scotland (R. Scotland), Wales (R. Cymru), and N Ireland (R. Ulster). In most areas, only the three BBC channels, and one or two independent channels, are available on TV. All TV stations are on UHF, and there is no cable. The Brits do not particularly want more than the 4 standard channels. (DBS-Direct Broadcast Satellite-is available for those few who do. It is fairly inexpensive since the high frequencies used allow very small, 24" receiving dishes.)

FM 103.2 MHz 24 hours

Here is a summary of the FM radio programmes available in the UK:

RADIO 1 - pop and rock music
65 FM stations in the 97.6-99.8 MHz band
26 MW stations, mostly on 1053 or 1089 kHz
on the air 0500-0200 daily

RADIO 2 - light music & informative programs
168 FM stations in the 88.0-90.2 MHz band
on the air 24 hours

RADIO 3 - "serious music and cultural programming"
168 FM stations in the 90.2-92.4 MHz band
21 MW stations on 1197 or 1215 kHz (to end soon)
on the air 0655-0035 daily

RADIO 4 - spoken word, current affairs, news, music
168 FM stations in the 92.4-94.6 MHz band
9 MW stations and 3 LW (at 198 kHz) stations
on the air 0555-0040 daily

RADIO 5 - sports, education, and "youth" programs"
23 MW stations on 693 or 909 kHz, to go to FM

LOCAL RADIO - service for 40 specific regions (typically larger cities, such as Radio Manchester, or counties, such as Radio Gloucestershire). These have local programs, trained, local announcers, pop/rock music, and local news staffs. Including relays, there are 89 FM stations in the 94.6-96.1 and 103.5-104.9 bands.

INDEPENDENTS - These generally cover small areas, have low power, and identify with catchy names, like "T-FM" or "Red Rose Rock Radio" or "London Jazz Radio." There are 111 separate stations on FM, not counting a few low-power relays, in the 96.1-97.6, and the 102.0-103.5 MHz bands. All are stereo, and most operate 24 hours.

88.0	90.2	92.4	94.6	96.1	97.6	99.8	102.0	103.5	104.9
BBC RADIO 2	BBC RADIO 3	BBC RADIO 4	BBC LOCAL RADIO	IND. RADIO	BBC RADIO 1	UNUSED	IND. RADIO	BBC LOCAL RADIO	

Notice the two prominent gaps in the FM band. 99.8-102.0 is currently unused in the UK, but there are plans to set up some national commercial radio networks in the future in this range. 105.0-108.0 is unused in the UK until 1996. Both of these provide to me, the DX'er, excellent DX windows since these frequency ranges are used on the continent!!

Technically speaking, an area is defined by the BBC to be served by an FM transmitter "if the field strength is at least 54 dB (relative to 1 uV/m) at a height of 10 m above ground level." ERP's vary depending on terrain and specific requirements, from 5 W to 250 kW. Polarization is mostly mixed (H and V), but about 25% are still horizontal and 25% are vertical.

In Europe, FM stations transmit with narrower deviations; often an entire channel is limited to +/- 75kHz, compared to +/- 100kHz in the USA. Channel assignments are made every 100kHz. As a general rule, lower power is used in favor of more relay stations. Almost all stations are in stereo.

There is no SCA as it is known in the US. In most European countries the FM stations use the Radio Data System (RDS) which presents time, frequency, station name, and occasional traffic reports and road data. All of this is via slow digital FSK data, on approximately 57 kHz subcarrier. One can drive all over Europe and, using a radio equipped with RDS, see the correct time and station name. In order to get any use out of my SCA decoders, I guess I will have to build a FSK demodulator and a digital display.

SUMMER, 1991 DX REPORT

Times are given in local, which is EDT plus 5 hours (GMT + 1 hour).

26 July, EGW (foggy, warm morning)

0630 97.3 LBC NEWSTALK, London, 4.0kW, 185 miles
0645 97.5 THE HOT FM, 1.0kW, 152 mi

Orebro, 102.8, 60kW, 784 MILES
Boras, 102.9, 10kW, 656 miles
Varberg, 103.8, 10kW, 620 miles

1 Sep, Tr

0800 conditions still good, but major part of duct is dissipated
0805 96.1 RTV BELGE DE LA COMMUNAUTE FRANCAISE,
Wavre, Belgium, 50kW, 360 mi. //300kW station on 621 kHz

2 Sep, Tr

0715-0730 DEUTSCHE WELLE FM NETWORK (new on air, female reads a list of stations, sites, and freqs over and over, in stereo)
Kaltenkirchen, 107.4 MHz, 495 miles Oyten, 104.1, 460 mi
Lubeck, 107.9 or 108.0 MHz, 524 mi Heide, 100.4, 455 mi

So, in 6 weeks' time, I've been fortunate to log over 220 stations from 10 countries by groundwave, widespread enhancement, an awesome tropo duct, and E-skip. The tropo over the labor day weekend was the best I've seen in 10 years; it broke my old 800-mile record set back in 1979 on a Memphis-Minneapolis path, and 1980 on a Memphis-Lubbock path. In the above loggings, I've selected the highlights only and included ERP and mileages to give the reader a feel for what DX was like here and how it compares to US. No re-logs listed.

I have no doubt that the duct may have supported even farther contacts on 31 Aug. The Visby, Sweden site is an island in the Baltic between Sweden and Latvia. This is as far as I could go without a receiver that tunes the OIRT FM band (65-75 MHz, used by eastern European/Soviet countries). This has also probably caused me to miss a lot of E-skip, as well.

I've not TV DX'ed, although the TV bands are wide open here. The biggest problem is that my multistandard TV does not have the channels numbered, I have no way to fix that problem, and I haven't yet seen a listing of European/N. African TV stations. I brought along my American TV, which is hooked to the FM antenna just in case some F-2 skip comes in from the States; no luck with that yet.

That about does it for this month; 73 and cheers, J.K. McE

Readers' Reports and "Lameness" Revisited

"Nice to see you at Dunkirk for the convention," writes Greg Coniglio. "Thank you, Bob Seybold, for having us. I am curious to see where it will be in 1992. Hopefully I will be able to attend. How did your modified car radio turn out?" [The car radio which Bill Nienajadly modified with his 150 kHz filters turned out razor-sharp--almost too sharp since I like to tune in 92 kHz SCS as I go, and that channel is quite attenuated; 67 kHz is fine. It was fun playing with the car radios that sunny afternoon in Bob's greenery.] "On the subject of of adult contemporary, I share your and Bill's frustration on the 'lameness' of the musical programming when there are so many other good songs out there that people will never get a chance to near. I can't remember who said this in your column a few years back, but he said it well: 'They are looking for songs that people won't dislike instead of songs people will like'. I don't think that Bill N. intended to offend anyone's disability when he thought up the term 'lame'. I don't think he is that type of person. I agree with your statement: people should not really feel offended by the 'lame' term--because none is intended. However, I think you could have made your point just as well without that 'invalid' remark--in my opinion, that was not very good taste.

"We were in NH during Hurricane Bob. Many stations were knocked off the air, though most were not off for long. WSRS 96.1 was in mono for a while, as was WOKQ 97.5, but both returned to Stereo later. WCOL 95.3 and WWEM 96.7 were off for longer, allowing me to DX. . . [which] was poor immediately following the hurricane--maybe the extreme low pressure? I also had some success with phasing, though I can't compare it to others, of course. I have never seen their methods in action! I use the Probe 9 on the roof, plus rabbit ears in my bedroom (the kind with dials on it); both run into a Radio Shack 0-10-20 dB FM amp, which has both 300 and 75 ohm inputs. The ones with selectors work better than plain rabbit ears. It works better with Es and trops than for ground wave. A few examples of success: Got 94.5 and 99.5 from Dallas area July 1 over 100-kw Buffalo locals. . . Also during weekend WWDL 104.9 PA, in the same direction; no sign of it without phasing. Got WSPI 95.3 over CKDS local that night, although I usually have a null in that direction anyway. Phasing just made it deeper. Hope you can use some of this in your column, Bruce."

For TV DXers: "Fringe communities in Wisconsin are investigating the dangers of large private TV antenna towers in order to enact control ordinances. Residences in cities as far as 100 miles from Milwaukee have erected towers upwards of 60 feet high in an effort to receive programs from Milwaukee and even Chicago."

--May, 1990, "Radio-Electronics" magazine

Bolstered by all the DXers tuning in, WCBS-FM with oldies, is No. 1 in the NYC ratings, according to info Bill N. sent. WINS 1010 leads in daytime with its news, prompting Bill to write: "Antique Modulation not dead in NYC," but then he goes "Hah! Heh! Heh! WNSR, We're No Super Radio," to an item about that 105.1 station in NYC dropping to 14th in the market with a 3.4 share. About the new rules which might help AM, announced by the FCC (one of which would remove some interference-causing stations to the new 1600-1700 kHz band after a five-year period of dual operations), Bill says "Hah! Heh! Heh!" to the idea that the new rules "should go a long way towards restoring the economic health of many AM stations," according to FCC Commissioner Andrew C. Barrett. Bill sent me a list of unIDs, and he heard a 91.7 station mentioning St. Paul and the Twin Cities. Could be KLSE or KRSW; possibly KAXE. The "WECL" 92.9 he heard is a new station in Elk Mound (Eau Claire) WI; and his "KQ-92" is KQRS-FM Golden Valley, not Warroad MN. Several stations in his area have separate nighttime or weekend programming from their daytimes. Examples: WHUD 100.7 Peekskill NY both b and a/c; WWDB 96.5 Philly monophonic talk days; stereo "m" weekends, while WRTN 93.5 New Rochelle has heavy metal Saturday nights and Sunday mornings, Spanish late weekday nights.

A personality branching out to station ownership is Susan St. James (of "Kate and Allie" fame) who will become the new morning host on CT's WZBG 97.3 Litchfield. When WZBG comes on the air next May, let

Susan St. James
No biz like radio biz

me know primarily if it has stereo, and secondarily what kind of music it plays. She and hubby NBC sports prez Dick Ebersol are owners of the station, along with others. The article Bill sent warns: "Numerous luminaries have lost their shirts by venturing into local radio. Stevie Wonder's KJLH (FM) Compton CA ranks 22nd in the L.A. market. Paul Simon and Lorne Michaels recently struck a deal to simulcast WNEW-FM during most of the day on their Hampton Bays station, WWHB. And Stephen King abandoned WZON in Bangor ME, after a year by selling to a dentist. Just about the only success

story is country idol Buck Owens, whose KNIX-FM dominates the Phoenix airwaves." The article failed, however, to mention the successes of Gene Autrey and Merv Griffin in their various broadcasting ventures. I wonder if any DXers have been successful at owning stations? I know J. Alex Bowab at WDLT 98.3 Chickasaw AL and Al Germond at KARO 101.5 Columbia MO, and I run W280CT 103.9 Hermantown MN for fun and profit (?).

John Marx found out that WFEN Rockford IL is on 88.3, not 102.3, as the FCC had erred. He's saddened by their appearance in the educational band, which along with WGSL *91.1, make two Rockford area "Bible thumpers cluttering the one part of the band I like to DX. . . I recall someone in a recent column was looking for Paris FM info. If I had an address for them I would send what I have. The Jamaica FM info isn't long enough/important enough for a separate publication. Nor would an eastern Caribbean/Jamaican list be enough. I'll just map it and offer it for an SASE to anyone who wants it." Write John at PO Box 971, Madison WI 53701.

From south FL: Christopher Dunne found pirates on 88.3: "Electric Radio" with an announced 1 kw and "Radio X," which may be the same station. WMCU 89.7 still g weekdays but gr on Sat. "I can get about a dozen additional FMs every day with the new RX302BK receiver, including 102.9 WIVY at 480 km! Sorry but I can't get it in $, hi. I better listen to WEAT 104.3 as much as I can; it's the last b south of Jensen Beach. . . A DJ's synonym for 'lame': 'Favorites'."

Saul Chernos reports *88.5 WRFI Radio Free Elmira (NY) "never got FCC approval--it was superceded by a gospel station that I heard during a visit there. Anyway, that didn't stop them from producing bumper stickers--I saw one in the Rongovian Embassy, a bar in a nearby village. . . Didn't have time to do any DXing while there." He mentioned calls of Lafontaine ON 101.9 being CFRH-3 (from CFLH) and I assume Perkinsfield is CFRH-2. I wonder if any or all of them have stereo? Nobody, it seems, has actually heard those low-power stations near Georgian Bay.

"Thought I'd drop you a note to express my appreciation for the work you did on my Sansui 919. It works great--easy to tune, with nice-sounding signals," writes Jim Wishner. With his selective tuner he can get next to locals like KNOW *91.1 St. Paul. "Not many changes on FM here since I arrived. Most of the activity has been on AM, as the stations try almost anything to stay on the air. And there isn't as much SCActivity as I would have thought from a major metropolitan area. No farm news, no medical news, just talking books and Muzak. If and when I get an outside antenna, I'm sure I'll be able to pick up much more. . . It was nice to meet you in person."

Gus Mancuso: "You said, 'chortles Gus'. It's just the way I write, sometimes I come across as poison pen, but none intended. You list new Temple U. station coming on in Dover DE?" [Yes, WRTX 91.7--b.e.] "Must have been some change at WANV 99.7 Staunton VA. Now get regular, never got before. Maybe 'less tower, more power'? (To get more coverage east in trade-off for less reception towards mountains?) Since WTRM *91.3 Winchester VA increased by 100 watts it's noticeably easier to null WESM. . . Different DXers [pick] up same stations during skip openings. I got some stations [from MD] as NJ and NY listeners at almost the same time on 6-16. . . . WAMS 1380 Wilmington DE silent. . . Remember station as a teen in '60s--helped fill in the gap between Baltimore and Phila. on trips to NYC." Gus promises a report from Atlantic City in the Northern FM DX column this month.

Harry Hayes sent a story about the new WUSR *99.5 Scranton, owned by the university there. It's expected on by Dec. '92, but no word on its stereo status or programming. Tom Bryant sent a picture story from "Broadcasting" on how KAGR, KMAX and KMLO plan to team up and program jointly on 107.1 mz in an effort to match the coverages of CA Class B FM stations, many of which are grandfathered in at more than maximum ranges for that class. Tom writes that the "map might even be a candidate for front cover use." I don't get "Broadcasting," but do read it in the college library--sometimes a couple of weeks late.

Karl Zuk says Gerry Turro's 103.1 translator in NJ now relaying WBAB 102.3 Babylon NY. In the past it's been WPST, WALK-FM, WHTZ, WYNY, WDRE "and now WBAB. World's record?" Karl kindly sent an udpate on SCServices in the NYC area. He asked if the CA3089 chip, as used on the Elf-IAdapter, can be used at 92 kHz? Yes, it can, but a separate adapter board is necessary--you can't "tune" on that adapter from 67 to 92. He sent an article by John Kean, "FM Subcarriers in the 1990s," from the Oct., 1990, *Broadcast Engineering*.

Look below, dear reader, for "See Also," the highly-acclaimed digest of what was in last month's issue that all America has been waiting for! I gotta run, and get ready a new "FM Atlas," about which details will follow in a month or two. Now onto selected information from my eight-page October FMedia! newsletter.

Finally, Ronald Purdue writes and says that the new FM in Stewartville MN (105.3 with no call letters yet) is scheduled to come on the air early in 1992. "The Mower County Board has given a go-ahead for a 152 m tower in Marshall Township (wherever that is). KWWK FM 96.7 is still on that frequency. They have trouble getting a new tower built only 7 km south of my residence (near Byron). Residents there are worried about radiation, eyesores, etc."

ON Windsor 93.9 CKLW-FM (CKMR), still "o," but some late '80s "recurrents. . . The Canadian government makes them run lots of news, and they employ the most bored, unenthusiastic news presenters that I have ever heard in a major city. The only positive thing to listen for are the old vintage 'CKLW' jingles that they are using from the legendary CKLW-AM. They always use call letters. . . '93.9—today's CKLW-FM'. Why 'today's'—since they play no music from the 1990s?"
TA Nuevo Laredo 97.1 XHNLO (not XHMLO), mr. "Technical info on Mexico is hard to get."

WI, ■WXRX Belvidere-Rockford IL, ■WNFM Reedsburg WI. Two of them, WTKM-FM and WXRX, have been granted power increases. WTKM-FM, now mono, reaches almost as far as Dane County. At 5,800 watts (the new power) that coverage would be greatly extended. However, if they plan to add stereo, this coverage area would be reduced. WNFM, in a very hilly area, reaches at least as far as Baraboo, where other low-power Madison area stations can be received. A station transmitting from Waunakee, unless very low power, would surely reach that far... Looking at FM Atlas-13 reveals that the frequencies 92.9 and 93.1 have no Madison-area station broadcasting on them. There might be some reason unknown to me why they weren't chosen, especially the 93.1."
WY Jackson KZJH 95.3 (from 95.7), to resolve intermod with WY Hwy. Dept. mobile radio system [000 h,v)
PR Vieques Island WSAN 98.9 229 m (50-/
VI Christiansted WAVI 93.5 (from 94.3), moving because of a conflict with a 94.3 assignment in the British Virgin Islands. The FCC was notified about this by the British Department of Trade and Industry.

Stereo—Or to be $tereo

AL Atmore WYDH 105.9, "Y-105.9"
FL Jacksonville WNCM *88.1. "We are stereo for music, but turn the stereo off for talk programs. It is a special control box an engineer made for us, which turns the remote stereo generator off and on."
GA St. Simon's Island WMOG-FM 92.7
MA Gloucester WBOQ 104.9 played a tribute to station founder when it was mono, Simon Geller. Geller could not hear the tribute as he lives in Las Vegas, where he is presumably spending the $1 million Doug Tanger paid for his station. The tribute consisted of playing Geller's favorite work, the hour-long version of Beethoven's Ninth Symphony. "Another glitch in WBOQ's existence is that it's at the exact frequency of WRBB, Northeastern University's station, so listeners on the Expressway might tune to 104.9 and get an overlap of reggae and Rachmaninoff."
MI Norway WZNL 94.3, co-programmed with WFNL 97.7 Sturgeon Bay WI
MI Sandusky WTGV 97.7, still b. "Yeah, we're still stereo. Sometimes when they do a ballgame the night before they forget to turn on the stereo the next day." [has CNNews

OTHER STUFF

The Hartford, CT application above is mutually exclusive with the renewal of WHCT-TV, but WHCT is dark & rumored to be liquidating their equipment, so they may not object. The application for Washington, DC is mutually exclusive with WRC-TV.

Local LPTV W10BI made a brief reappearance in early October- they were on for about 10 days as "Your Classic Rock/Golden Oldies Station". (two different ID slides) Audio was continuous oldies music. They vanished again around the 8th. This one had relayed WJFB-66, now dark.

FORUM

Bill Fahber forwarded a bunch of previous correspondence, and I've received a few letters myself, leaving a bunch of stuff to catch up on:

Frank Aden Jr., Boise ID:

"Regarding to the changes for KAID in your Dec. column. The increase in power is correct per FCC listings, as for them moving to a new tower, that is incorrect. ... changes in coord. & HAAT are due to new readings taken for the site using new maps and altitude measurements. 5.9 mile north of the site would put them on the down side (opposite of Boise valley), out of transmission range to most of the Boise valley."

I seem to be seeing a fair number of these coordinate corrections, although many of them are for AMs.

Ken Onyschuk, Riverdale IL:

Ken wrote reporting WJYS-62 on the air approximately 3/4/91. Transmitter is in Tinley Park, Ill., about 15 miles/24km west of Hammond.

"Unfortunately it's another HSN affiliate. But I'm confused; the long distance # shown on channel 62 is 1-800-284-3400; the HSN # for channel 60 is 1-800-284-3200, WEHS-TV." [WEHS Aurora, Ill.] "Stn. IDs as Ch. 62 WJYS Hammond-Chicago".

HSC has two networks. My understanding is that the Home Shopping Club is carried by their owned-and-operated stations (of which WEHS-60 is one), and the Home Shopping Spree is carried by affiliated stations owned by others. (WJYS-62 would be such a station) 284-3400 is the number for the Home Shopping Spree, as confirmed by checking my local LPTV; 284-3200 is probably the number for the other network.

Robert Baker, Humboldt IA:

Regarding the reduction of KIIN-12 Iowa City's antenna height, in the 2/91 VUD:

"This was probably part of transmitter and antenna replacement (old equipment was 20-plus years old) in fall 1990. KIIN now has stereo and SAP, although they were delayed until about 2/1/91 because Iowa PTV and AT&T could not get digital stereo & SAP from Des Moines to Iowa City on existing microwave equipment."

I have three letters from Ben Wikie, York ME:

who mentions a VJN station, "WAV-TV" on channel 33 in Boston. This is almost certainly a LPTV, probably W33AV. Ben says it's "almost as good as WSBK-38 or WLVI-56"; my guess is that they're fairly high power (LPTVs on UHF are authorized up to 1kW transmitter power, which can provide ERPs of 50kW or more) and have a transmitter location north of Boston. (the Boston antenna farm is west of the city, in the Newton area just west of Route 128) There is no channel 33 allocation to Boston, nor is there likely to be one in the future due to the presence of WSBK-38; full power stations in the same city are not usually allocated less than 6 channels apart.

Regarding WHRC-46, they've been off for several months; Bill says they went dark on 9/21/89.

Ben also reports that WMFP-62 is now a Channel America affiliate. (the first full-power ChA I'm aware of- are there more? Guess I need to record an ID off the bird; I've been using ChA to calibrate a new dish at work...) He says the hourly ID is also listing a channel 57 in Portland, ME, but he isn't seeing it. Ben does report a channel 24 translator of WCBB-10 Augusta. WOCD-55 Amsterdam NY is also reported as being ChA.

Regarding WHCT-18 Hartford going dark, Bill confirms this, and reports on Compuserve indicate that WHCT's equipment is being liquidated- don't expect this one back anytime soon..

"Have you any idea why Fox 33 in Utica N.Y. would relay their signal on channel 11?, seems strange to me. I was travelling across New York a couple of weeks ago and saw it." Two possibilities I can think of. If I remember properly, Utica is a fairly hilly city; maybe a translator on channel 11 was installed to fill in a shadowed area where channel reception isn't very good. Alternatively, it could be a cable leak- I just spent a weekend in Little Rock, Ark., and DXing VHF with my pocket TV was essentially impossible, as CATV leaks filled the VHF band. Luckily, UHF and FM were a lot cleaner...

Finally, Ben asks about a TBN on 18 to the southwest, speculating that it's in southern New Hampshire. Seems reasonable to me, I'm kinda short on LPTV info. He also mentions seeing the new TBN in Albany, NY on channel 64.

Tom Bryant, Nashville TN:

"W68CG has already gone through some changes. About three weeks after signing on with HSN and simulcasting HSN with W12BV and W24AE; the owners changed the programming to VJN, and 68 now simulcasts with W59AW. ID's show a very large 59 on the left center, and a smaller 68 to the right." "The ownership of the two channels is different, but the 68 people made a deal with the VJN folks at 59 to provide programming." This was mailed in February. W59AW is now dark, and W68CG is alone with VJN programming. Interestingly, W59AW was mono but W68CG was (and still is) stereo. The ID is now for W68CG alone.

"Also, WKRN-2 has changed signoff hours again. Due to contractual re-alignment with CNN, WKRN is only allowed to carry that service 2 hours per night, and has elected to do so between 4 and 6 AM Mon-Sat., and 4:30 to 6:30AM on Sunday..."

A wealth of information from Mike Reid, North York ON:

"W26AT, Williamsport PA is with WYOU-22, not WVIA-44. WVIA gave up the CP and WYOU picked it up."

"W26AL Marietta, OH: currently 100w TPO, hopes to go to 1kW by the end of this year. Programming is local and TBN."

W05BE Jeffersonville, IN (Louisville, KY) is owned by Brightness Ministries. "They hope to get W08CT, New Albany [also a Louisville suburb] on by the end of February. After that they hope to get W26AS, Clarksville IN, on after W08CT."

Mike reports WTJC-26 as having switched to Home Shopping as of 12/1/90. I can confirm that as I received WTJC back on Jan. 1. Mike says they're still owned by the same religious outfit (although I seem to remember

reading about an ownership transfer in *Broadcasting*) and still run some religious programming on Sunday afternoons.

Regarding the channel 21 application in Orillia, "Baton seems to think that Toronto people miss CFTO-9 when they go on vacation. CKCO-TV, a fellow CTV affiliate, may not like this either, as it will have a large overlap with the [CKCO] Huntsville and Wiarton rebroadcasters."

W51AN (TBN Olean, NY) is now W22AZ. (10kW ERP, per WBF)

KSBI-52 Oklahoma City is on, but only from 7-10PM Central time.

WIVB-4 Buffalo still on channel 4-. They were supposed to move (to what offset?) due to a drop-in at Utica, but probably won't have to until the new Utica station starts up. (I wasn't aware of a channel 4 dropin at Utica!)

Mike also has more information on the cutbacks at the CBC:

"... There have been no transmitters shut down. Service has been severely reduced at Corner Brook, NF; Sydney, NS; Rimouski, PQ; Sept-Iles, PQ; Windsor, ON; Saskatoon, SK; Calgary, AB; and CBLT, Toronto. Closed completely are Goose Bay, NF; Matane, PQ; and CBLFT, Toronto. Some lists put CBLFT in the 'severely reduced' category. I think the 'severely reduced' stations still have local crews to feed news items to some other station. The 'closed completely' group seem to have become rebroadcasters of some other station. ...CBLFT-25 now repeats CBOFT-9 - CBLFT carries the signon, signoff, IDs and ads of CBOFT."

Finally, in an article from the Jan. 21 *Florida Times-Union*, "The Star Television Network, which featured serials such as *My Little Margie* and *The Rebel*, has gone out of business... Star launched with 10 affiliates reaching 9 million households nationwide when it had hoped to have 20 affiliates reaching 16 million households."

Jeff Kruszka, Harahan LA:

Jeff mentions that the E. Washington State *TV Guide* shows Fox stations "KCY"-53 Yakima and "KBW"-66 Tri-Cities (Richland - Pasco - Kennewick) are on the air. These are almost certainly actually LPTVs, K53CY and K66BW respectively. Also, "per the David Letterman show, there is a new NBC affiliate in Nacogdoches, TX - KLSB (satellite of KETK Jacksonville); channel not mentioned. I show a CP for channel 19 in Nacogdoches, that's be my guess.

Ronald Purdue, Byron MN:

"... KXLT-47 in Rochester is once again off the air! I do not know why? My best guess is that KXLT is installing a new xmtr to broadcast in stereo, if KXLT does not return, I'll let you know." Ronald says KXLI-41 is now in stereo, but has reduced its hours of operation, duplicating KTMA-23.

"There is still no sign of WEUX-48 nor have I heard of anything more on the status of KVBM-45.." I haven't seen any recent changes on KVBM or KXLT.

KITN-29 is now in stereo with 5000kW. Ronald mentions a considerable improvement in their signal in Rochester.

John Combs, Tallahassee FL:

John sends along two articles from the *Orlando Sentinel*. One concerns the channel swap of WKCF-68 and WRES-18; "The change is scheduled for mid-October...". WKCF will go from 2600kW to 5000kW, and will relocate its tower from Orange City (near WESH-2's tower, about midway between Orlando and Daytona Beach) to Bithlo. (where most of the Orlando TV towers are, about 30km east of Orlando)

"WKCF has agreed to pay WRES $1 million for a new transmitter and $240,000 to cover operating costs for two years... The station's (WRES) transmission will go from 1,000 watts to 60,000 watts." (presumably transmitter output)

John also sent along a Reuters clipping regarding the integration of the old East German television into the system of unified Germany; will excerpt that one next time.

I've also received letters from Matt Sittel and Dennis Park Smith; you'll be in next month!

73 Doug

SATELLITE NEWS

George W. Jensen
4604 Anntana Avenue
Baltimore, MD 21206-4220

Greetings again. Because of major surgery the last few columns had been prepared a little in advance. As a result there follows a lengthy list of additions, subtractions, etc.

Satcom 5 - Aurora 2 - OMIT NBC feed on XPDR 7

Satcom C1
Add the following
2 - KUSA - Denver Colorado VC 2
4 - KCNC - Denver Colorado VC2 16 - Cal-Span noted here
6 - KMGH - Denver Colorado VC2
12 - KRMA - Denver Colorado VC2
14 - KWGN - Denver Colorado VC2

8 AND 9 - NBC feeds

Galaxy 1
1 - Comedy Central - VC2 - planned
13 - CMTV - Country Music Television VC2 planned

Satcom F1
8 - now called - QVC Fashion Channel
24 - Omit RAI Italy via New York

Telstar 303
19 - believed to be SHOWTIME !! VC2

Spacenet
3, 5, 9 and 23 - PBS - no longer VC2
15 - a radio talk show pumped up via a video signal
17 - noted once - Furr's Satellite Network Mountain Time shown
18 - Univision News and Feeds

Morelos 2
15 - someone using MAC
17 - the college ETV that was on 8
Increasingly active SCPC noted

Morelos 1
2 - Imevision - ch 13 ID logo now seen frequently here

ANIK D2
11 - OMIT- Weather Network to E2 C
22 - OMIT - First Choice to E2-C
23 - CBC World News Channel OMIT to E2-C

28 - Family Channel VC2
32 - Atlantic Satellite Network

Spacenet 4
6 - ID Card also ID card on Ku side

Westar 4
17 - World Harvest Television/WHME - ch. 46 South Bend, Ind.
18 - ABC/NHK Tokyo feeds

Telstar 301
ABC using Leitch encryption system

Galaxy 3
12 - The Barker (for Pay-Per-View programs)
23 - Comedy Central VC2 planned

Galaxy 6
19 - Helen TV from St. Lucia here from XPDR 21
same times EDT

Spacenet 3
21 - QSO - Amateur Radio on Subcarrier

Telstar 302
5, 9, and 21 VC2 are new testing service
called HBO 2 , HBO 3 and Cinemax 2

Satcom4
12 - International Channel - VC2 - planned
17 - Shop-At-Home
24 - Infonet Channel of Home Shopping Club
22 - Deep Dish - occasionally

Galaxy 2
WHP lottery feed varies

Satcom 2
OMIT 2, 4, 17, 18 and 22 - Denver stations to C1 as shown

Spacenet 2
3 - WorldNet here from 21
10 - Galavision Europe feed - Omit PAL format now NTSC

PanAmSat

Ku
move NKH primary service from 1 to 14
4 - TVB - Belgrade, Yugoslavia in NTSC in evenings
begins with English language newscast/Radio Belgrade
local service is carried live on Subcarrier.
On the C side
10 - HBO Ole - MAC - Spanish Latin American Service
21 - Not necessarily Panamerican Television from Lima,
but ID's as SUR - Channel of Channels and in the
evenings carries newscasts from Televen Caracas,
TV Nacional de Chile, Aggentina and others in NTSC.
Audio Subcarrier remains the same.

SCI-FI CHANNEL plans to commence soon possibly using
Satcom 4 - but vacant XPDR onF3 would seem possible here.

America's Talk TV was to have debut in September, but be
darned if I've seen it.

That's all for this time - see you in 30.
73's

Gregg

oops - just in - Turner Television plans an Animation
Channel - details pending

1992 CONVENTION HOST NEEDED!

A VOLUNTEER IS NEEDED TO HOST WTFDA'S 1992 CONVENTION. IF YOU'VE EVER THOUGHT ABOUT HAVING THE CLUB'S ANNUAL GETTOGETHER IN YOUR HOME TOWN, NOW'S YOUR CHANCE TO OFFER YOUR SERVICES AS HOST. IF YOU WOULD LIKE TO HELP, WE NEED TO HEAR FROM YOU **IN WRITING**. A PHONE CALL, FAX, TELEGRAM, ETC. WON'T BE ACCEPTED--IF YOU ARE SERIOUSLY INTERESTED, A SIGNED NOTE OR LETTER FROM YOU, TO THE WTFDA BOARD OF DIRECTORS, IS REQUIRED. THE DEADLINE FOR BIDDING IS NOVEMBER 20. IF MORE THAN ONE BID IS RECEIVED, THE DECEMBER ISSUE WILL CONTAIN A BALLOT FOR A MEMBERSHIP VOTE TO CHOOSE THE WINNING SITE...AND IF ONLY A SINGLE BID IS RECEIVED BY DEADLINE, THAT BID WINS.

WTFDA BOARD OF DIRECTORS - P.. BOX 514 - BUFFALO NY 14205-0514

NOVEMBER 1991 ⇨ DEADLINE: The 5th ⇨ LOG CUTOFF: 2 months from when mailed

News in this month's column: Most considered September to be a very poor trops month, the opposite of last year. The big news has been the late season e-skip opening on August 23 (with some on the 22nd too), which was heard by many. Also, the Perseids meteor shower was very active the afternoon of August 12, giving several DXers some new catches. Some tropo on August 25 as well. Plus, Mike Bugaj gives filter advice for Carver TX-11 owners. Let's hear from you next month!

KDAL 610AM
96 LITE FM
425 West Superior St., Duluth, MN 55802. (218) 722-4321

Sorry to have missed convention, big news here was arrival of Lucas Carl on 5-30-91 (Congratulations-gc), thus my availability of free time is greatly diminished. (Though getting up at 3AM to change diapers has allowed for some prime time DXing). In other news: 103.5 in Newark,NY puts in strong signal here of course it is downhill to their tower, rock and roll format (stereo), trying to get a piece of that market I guess. 101.5 in Homer (30 miles) away heard okay but not very strong, and they do not ID very often. Also, I have been playing with a low noise preamp after a bandpass filter for my car radio. Good results noted with the "MMIC" device. I can actually hear meteor pings on clear channels ("What will be next?" says my wife) Besides that, everything else is okay; still looking for that big great lakes trop opening sometime soon. Best 73's, Jerry

MARK STRICKERT - 3852 N. OCONTO - CHICAGO, ILLINOIS 60634

August 26: 89.3, WNUR had a rare silent period, caught WDLM East Moline, Illinois, WGNB Zeeland, MI and WPNE Green Bay WI. WDLMfm and WGNB both Moody Bible Stations, but both were local at the time, not // WMBI or WMBI fm, though WGNB was simulcasting WGNR Grand Rapids MI. WPNE sounded like they were coming out of NPR "Morning Edition", with typical Wisc. Public Radio-type legal ID time. Oddly, no sign of WKKC (sign on after 8am perhaps?).

90.5 dominated by WNIJ Rockford IL since their late April sign on. Former regular WKAR East Lansing has also had problems here from WPHN Gaylord (religion). WNIJ runs NPR news shows, jazz, and BBC news late evenings. Shares a nice new facility with WNIU 89.5 on the Northern Illinois University Campus in DeKalb, at 801 First St., just north of WLBK/WDEK and a few blocks south of WDKB, all most convenient.

(Correction from last month: Mark's "Radio Central" is available for $5.00-gc)

September 6th brought me the best enhancement of Michigan ever experienced. Most Detroit stations were local in stereo. Especially convienent for Sam Brown of UPI who was visiting and hoped that I could receive the Motor City. We had four tape machines rolling on different stations for his collection. CKLW old jingles and 89X music format drew the most interest (Their new format does sound very interesting-gc) Sam helped me set up m;y phasing equipment which has helped catch the odd difficult one. Two outdoor towers would help a lot more I'm sure. Most happy with snagging CJAM 91.5 Winsdor's 29 watter. I've tried for 1 1/2 years to catch this one. Closing in on 500 logged so far. Should reach milestone, or is it kilometerstone, by the end of the year. Hope others caught the strong Michigan opening (I missed it at home, but noticed on the car radio-gc), 73 dB Bruce Hall

STATION NEWS: KBMA 99.5 in Bryan, Texas in on the air with a Spanish format. WPHD in Tioga, Pa. is now on 94.7 (Thanks Dave Nieman) WBNE 95.9 in Benton,Pa. has gone to WZZC and "Z95", classic rock format, 99.3 in Williamsp Pa. has dropped country for album rock.

Don't FM DX as much as I used to. Checked 8/25 during good TV opening to west. I was surprised to be getting Ottawa so well. CJMJ was lighting 3 (of 5) LED's (CBOF and CJMJ seem to get out very well-gc). Considering that I was getting Milwaukee on TV, there was a nice east-west path for somebody. Since the Molson Indy will have a station every year, I'm counting CIEX as a relog of last year's CJLX. This could be counted as new each year, as the license is good for each appearance. After a few years my list for 91.9 would look a little odd, to say the least. Locally: Applications for 99.1 Toronto were being accepted as of Sept. 5. Rawlco has asked for a six month extension to get 92.5 Toronto on the air. Rumour has it they are going to try for 99.1. CIRV 88.7 went to 250 watts sometime before early May. In Charles Gauthier's Cuban report, the Jamaican net IRIE is phonetically written as "Airy". This was not meant to rhyme with "merry". In some FF words "ai" is pronounced as "eye", so he didn't hear it wrong. Anyway, I note that CBO and CBOF are in more often than I thought they would be. (Same here. CBOF 90.7 often overrides semi local WGCC even on the car radio-gc). 73's Mike

1746 WSKR 102.7 NJ Petersburg, "Sports Radio 102-7" directly in line with WNEW and hitting them real bad at times. Haven't been able to hear the calls (WSKR, Mike-gc)

Some comments here: 1. What lousy tropo months August and September have turned out to be. What tropo I did get (WFRB,CBL) were real weak. This has to be the worst in years! 2. In case you didn't notice, the Perseids peaked on the 12th of August from 1100-1300, not around 0100 like the TV stations said it would. Lucky I was home on a rare lunch break and even luckier that Bill Nollman called and told me about it! 3. For Carver TX-11 owners, a little experiment you could try with filters if you want. First, put your original old filters back in F101 and F102. Then stick 150s in F103 and F104. Then either put a 110 in F105 or put two 150s wired in series into F105. If you have the same results as me you should notice the best selectivity, good sound, and your signal LEDs should be much more normal. There may be a tad more distortion using the two 150s in seris than the 110 on weak signals. NOTE: This does not work on TX11A tuners as the circuitry is different (we tried it). Good luck!

Bill Nienajadly (Dude from Joisey) PO Box 2999 Clifton NJ 07015-2999 201-478-3044

Trop Summary from Late August to late September.....Binghampton to Norfolk, Eastern shore MD Boston, New Bedford MA, Hartford, Springfield MA, Baltimore, East PA etc....120-300 miles.

This season did turn to be below average, though I have seen much worse than 1991. The sunspot activity/solar flares were to blame, I belive. All in all I say this season was a stinker.

I did go to Dunkirk for the 1991 WTFDA convention and had a great time. I agree as others do that, TV DX is the best by far! FM at Dunkirk was very interesting, but alas, there are a lot of semi locals that crowd the band there. We modified some FM car radios and potables, we did comparison tests, and learned a lot in modifying various radios. For instance, on Bruce Elvings car radio, we had to pull off the entire bottom dash to get at the car radio. But in Bruce Hall -'s car, we just had to remove a face plate which just easily snapped out. If you want to mod- -fy a GM car radio, it IS easy really, but I recommend getting a TORX srewdriver. Many new cars these days are using TORX screws . Also a nutdiver set is another good idea to have. Thanks to Mike Wimer and Bill Nollman for lending us the tools to do the car radio mods.

How well, did the mods work? After modifying(Bruce)Elving's and Hall's car radios, they were able to get 96.3 CFMX-1 right next to super local Fredonia (the next town over) 96.5 WCQA and super strong WJYE 96.1 Buffalo. Oh yes, we used 150 khz filters in the car radios.

Another modification that I have done, is the elimination of AFC, In 14 radios that I have tried to eliminate AFC...I was only successful in 6 radios. Here should be a real easy one for you. Audiovox car radios..... after lifting the cover, look at the tuning capacitor area. Note the various wires going to the area, locate a green wire, this should be located toward the end of the tuning capacitor area nearest to the back. Snip the wire, and the AFC should be gone! If not, re solder the wire and retrace your steps. I do want to remind that if you are not sure with what you are doing (modifying radios, etc) then send it out to a repair shop or someone who knows electronics well.

Those who are looking for the Antennacraft antenna should be aware that Radio Shacks sell the Antennacraft 10 in Canada only for $59.95. And it is interesting to note that US Radio Shack's only sell the 6 element, where as the Canadian Radio Shacks only sell the 10 element.

Lastly,the only DX worth speaking of here in late September is the excellent F2 skip on 10 meters. On Narrowband FM in the daytime one can hear England and the rest of the UK talking to the US & Canada. Very Interesting! Lets hope for great fall trops! Goodxing!

SPECIAL REPORT: I was in Hampton, New Hampshire from August 17-24. Yes, during Hurricane Bob! We had to spend an entire day in a hurricane shelter, but thankfully there was only minor damage in Hampton. I hope no one along the east coast lost anything from this storm. Anyway, FM DX was fairly interesting, but not as much as Ocean City or Myrtle Beach. The farthest reception to the north was CBAF 102.3 Frederickton, NB one night only (the only Canadian heard). Boston and SE New Hampshire were local, and Worcester, Portland, and SE Mass/Providence were semi locals. All of my U.S. reception was limited to New England with the exception of four stations: WSKQ 97.9 NY, WQHT 97.1, WHTZ 100.3 NJ (with WHEB knocked off the air, WOTB and WKIT also heard), and WBLI 106.1. Surprisingly, very little Vermont was heard, only WZRT 97.1, WJJR 98.1, WEQX 102.7, and WVPR 89.5, all weak. Othe highlights: Upper Maine: WQCB 106.5 had a very good signal and scattered in frequently. You guys in S.New England and Jersey should try for it. That was the farthest north in Maine heard, down the coast WQSS 102.5 and WMCM 103.3 were both heard over their Boston counterparts; same with WTVL 98.5. Also heard WKSQ 94.5 and WWMJ 95.7 Ellsworth over WZOU and WZID right on the beach, but at the condo on the balcony no sign of this. WMME 92.3 made it in once over WCDQ/WLYT splash and WPRO. The strongest station overall from Maine was WBLM 102.9, by far. To the south, Hartford scattered in, especially at night. Springfield would show up on 102.1, and 97.9 occasionally. Heard WEZN 99.9 over the WQRC/WKZS mess once. WHCN topped WKRH once on 105.9. Had WWKX 106.3 RI one evening over both local WHOB Nashua and semi-local WPKM-ME which was also overriding WHOB. That was the only real strong opening: to Rhode Island (100 miles). There were a few enhancements into Maine. WWRX 103.7 had no trouble coming in over semi-local WZPK; the both of them prevented me from getting WKNE 103.7 at all, even though it was just 50 miles away. Oh, and I had 92.1 WMDK NH over semi local WCDQ, and WNNH 99.1 over WPLM-MA. Several times, an open carrier overrrode local WCQL 95.3 Cool 95.3. I would guess that this was WMBR Cambridge. WCME 96.7 ME, now country, was heard with local WWEM off. Best frequencies: 4 heard 100.3: (WHEB/WOTB/WKIT/WHTZ), 3 heard: 97.1 (WYOU/WZRT/WQHT), 99.9 (WQRC/WKZS/WEZN), 102.3 (WKXL/WQQY/CBAF), 106.1 (WCOD/WCDQ/WBLI), 106.3 (WHOB/WPKM/WWKX), 105.3 was the worst: completely dead, no splash or intereference, no sign of anything the whole week. I was hoping for Philadelphia. Back home, usually September is an outstanding month for trops, but this year it was horrible. About the only thing I have heard is aurora. Thank you Mike Cherry for sending in logos! Don't forget to check for trops. November can produce great trops, as we found out Thanksgiving 1986, what some consider to be the best opening ever. Last year there was also great trop Thanksgiving time in the northeast and midwest. So keep your ears and eyes peeled, the season may not be over yet!

:SOUTHERN • FM DX:

Danny Buntin
1312 N. Skyline
Stillwater, OK 74075

DEADLINE: 14th

SOUTHERN FM DX is for reporters from: AL, AR, AZ, CA, CO, DE, FL, GA, HI, KS, KY, LA, MD, MO, MS, NC, NM, NV, OK, SC, TN, TX, UT, and DC. Happy DXing and report soon!

FALL TROPS STARTING OFF SLOW.

Not much remarkable development in fall trops, so far. Openings have ventured little over 500 miles with most all staying will under that figure. To conclude the Es season, August had a couple or so good openings.

WHY DOES SAN ANTONIO GET SUCH HUGE AMOUNTS OF ES?

For many years DXers have viewed with fascination the consistently vast amounts of Es reports that have bounced out of San Antonio, TX. In 1973 while Glenn Hauser was down there DXing in the suburb of Von Ormy reported in with virtually six pages of Es. It's been said before that a good day of Es in San Antonio is down right exhausting. Throughout the 70's and 80's permanent resident Pat Dyer reported on Es in ~~dozens of pages~~ as the seasons came and gone. He became the top man for totals in the FM statistics ~~column~~ by far, effectively shooting down any notion out there that one must live in a small town well away from a large city to accumulate a vast log. San Antonio is at or near the 10 largest metro area in the U. S. Despite that distinction,station congestion must be lighter in San Antonio than in many other large metros. There is only one large metro area within 175 miles.Another important factor playing in is that the DXers mentioned were in the rare position of being able to spend quite a bit of their waking time in front of the dials. In the early years I was also in a similar position but for a few summers. My results with Es could not come near the amounts in San Antonio. Years ago one reporter who spent much of the season at home assured other DXers that they weren't missing much since conditions were so poor. I was tempted to go back threw past VUDs to find that comment and then see how many pages of Es were coming out of San Antonio but didn't. Still, why does San Antonio get so much Es? Well, my answer is based on what I call my "well stuffed doughnut theory" and goes like this. Take a doughnut a 1000 miles wide and center it on San Antonio. The inner ring of the doughnut would be 500 miles from San Antonio while the outer ring would be 1500 miles, representing a typical range for Es loggings. A study of the area the doughnut includes would suggest that San Antonio lies within easy Es range of large concentrations of stations in broad areas. The area between the Mississippi River and the east coast is quite a rich area from which to receive many stations via Es along with California. Then take the doughnut and center it on a east or west coastal city and in contrast one finds large areas where the potential for Es is wasted over very broad areas where few, if any, stations are to be found such as ocean water and central portions of the U. S. and Canada. So with that in mind in the future when we retire let's take long summer vacations in San Antonio and exhaust ourselves soaking up all the Es.

ALLEN's comments start next page.....

This endeth a very poor tropo season with a fair opening to SD on the 6th and a weak opening to eastern KS on the 19th. I'm hearing out to 400+ miles on tr s better than ever, with several regular 400+ milers rising above the white noise several times an hour, but enhancement beyond 600 miles has been virtually nil all year. Last year's final tr opening was 10/1, so I'm not optimistic about tropo until spring despite the unseasonable mild early October weather(only two snow storms so far this fall). We added 231 new ones this year ending with 971. The good meteor showers of 10/18-23 and 12/10-14 make our goal of 1000 for the year a possible, but difficult one, especially since we've rejoined the National Radio Club and will give AM DXing priority for a few months. And, of course, you can find us on any of the ham bands, 160 meters to 1296 mHz. Thanks to many of you for all the help with unIDs. And concerning unIDs, let's all support Matt Sittel's new column! Best 73.

September 1991 cutoff 3 months Deadline Oct 5 1991

The MUF Reaches channel 12! Carlon Howington of FL logged CFTO-9-ON & Channel 7 in Detroit! Ed Phelps of KY logged WWOR-9 of NYC! And maybe WPIX-11-NYC. Many, Many reports of VERY SHORT SKIP! Ranges of 350 miles to 500 mile very rare for E-Skip were reported! All I can say is... Read the juicy DX in this column! Did 1991 E-Skip turn out to be a stinker? ....Nope!

Comments on July 19th

In the midst of a humdrum skip season, came one of the the better openings I've seen in a long time-boy, am I glad I had the ebening off! After noting some very short skip, cheif of which was WUNC-4 at only 476 miles, low band TV quickly became a jumble of CCI & I spent much time on FM. A call from Carlon Howington in St. Petersburg, revealed that he experienced hi-band skip between about 2010 & 2040 on that night. He positivilely IDed WXYZ-7 (MI-BN) & CFTO-9 (Toronto-BN), he had a Breif UNID-11 & even a minute or so of CCI on 12!

Hampered as I am with a crappy VHF antenna (probably has negative gain on hi-band, hi!) I was unable to positively ID anything on hi-band.

73, John

July was certainly an improvement over June for me as far as E-skip goes. Lots of neat loggings this time, with some especially short skip! The MUF on 7/19 reportedly hit ch.12(!!!) in FL, so that explains the short skip on that day. I have a tentative of WSB-2 GA at just 350 miles on that opening-program matched listings, but I want to rule out other stations first. 7/17 was fun,too, seeing Puerto Rico, something I have never accomplished from Kingsport,TN. Log totals stand at 175. Also, I am the new CCI editor now, so please send your unIDs to me at the above address. 73's, Matt.

Dave Nieman - 12284 Nice Road - Akron, New York 14001-9529

Equipment: Unchanged. New loggings are underlined.

E-skip on the rebound towards the end of July here,the openings on the 19th,20th and 30th were the most productive. My cuba 3 is likely from the Pinar Del Rio Province, SW of Havana, distance here is approximate.

My sincere thanks to all of the VUD readers who responded to my request for station info. I now have enough station lists to cover my desk, and have solved several Unid's as a result As usual the members of the WTFDA have come through !

TV INFO; As a user of a late model Zenith (SG2795BG-'90) I must say that Harry Hayes' comments in the July VUD were right on the mark.While the newer sets are more feature packed than ever before, few of the features are designed with the TV DX'er in mind.My set,like Harry's, has that annoying audio mute feature, which can ruin Id's and forces one to contantly man the mute button.The set also squelches weak signals, but I have found I can over-ride this by hitting the 'enter' button again, and thereafter I can watch uninterrupted snow if necessary.By far the biggest drawback on this particular set is the lack of video output jacks; shameful for a TV in this price range.(I was fooled, there is a VCR loop output, but it only puts out on Ch 3 for use with a cable box.)

The set still has some redeeming features including decent image/adj. ch. rejection, and dual antenna inputs which can be A/B ed via the remote. Picture-in-picture triple flashback is also neat; It's possible to watch 3 TV stations superimposed over cable or a video tape, and to change these 3 stations at will. If you line up ch's 2-3-4 you can watch the MUF climb during a skip opening !

I decided to replace my set with an Icom R-7000 (the set will serve as the monitor) I've only had the Icom a few days now (I'm still waiting for the Video adapter) and the results are impressive. The only crossmod problems are on VHF with the antenna pointed at the locals (also experienced with every other tuner I've tried) In fact, as audio goes, it's much less susceptible; It will lock in WGAL-8,over eighty miles away, with clear audio in the FM wide mode while the Zenith is overloading from the local Ch.9. Then there is the FM narrow mode, which as other members have reported, allows you to separate offset audio carriers. This may be the single best feature on the receiver, and one that the TV DX'er can really appreciate. The S-meter was handy for fine-tuning my traps, which isn't easy to do by eyeballing (at least two were way off !) I hope we get some good tropo this fall to try it out on.

Footnotes
(1) Got "WJ..." on cassette tape (audio), and 2 Escanaba FMs were in simultaneously.
(2) All I could catch was "Canal de las Estrellas"/"TVO". Definitely Mexican, 'cause Tampico FMs were in, and it looked like "XEW" on screen plus what looked like Televisa logo. Had a program (soap opera), "Yo No Creo en Hombres" ("I Don't Believe in Men") at 7pm EST. Maybe Monterrey?
(3) NEW TO AIR from St. Pete. 1397 kw visual power mentioned in sign-off.
(4) Said "KY3". Is this KYTV Springfield MO?
(5) I'll have to scratch out my WHSV logging of last month; then I heard "Harrisburg" & thought "Harrisonburg" (VA), but now I see (from my copy of BROADCASTING YEARBOOK 1983) there is a Ch 3 in a Harrisburg. Multiple ID w/ Marion & Carbondale (IL). Called themselves "LTV 3".

Hope soon to catch Es on somethin' other'n Ch 3, like last month. Oh well....

Notes: #1 ID as CKND, the channel 11 in Winnipeg. CKND2 call was gleaned from information in a 1990 Doug Allen report, no city of license was mentioned .
2 this channel 4 programming w/NBC was in during an almost exclusively FL opening. My old log book notes that all of ch 4's in the Southeast are CBS. Did WJXT, WTVJ or WTVY change network affiliation or does one of these share NBC & CBS? (Harry, I can't answer your question on network changes etc, But, perhaps consider other possibilities as short skip,7/19 had a lotta short skip that day-BN).
3 KTCA, KETS & WBRZ all in just about the same time this night also possibly KDLH-3 Duluth -quite an area spread! Unfortunately the MUF stayed around channel 5.

All I have to do is complain a little bit and the season improves. This still is one of the all time poor seasons, but late July's skip activity move it a little closer to 1990 which wasn't all that great. Mid July featured an absolute absence of any skip activity that I could see. One of the hottest & Driest months on record in the North east, resulted in little or no tropo. 73

We were married 50 years May 14. T also was at my 60th Hi-school class reunion. On July 27 a hot air balloon landed in the field by our house and they gave us a free ride, another landed just below our house. We have 18 acres. I thought it was quite a novelty for a couple, senior citizens (me 78, Marge 70). Good Dxing Frank W.

having given up on UHF (I don't evn list the equipment used), I have 2 TVs parked on channels 2 & 4. The results are pretty good! Almost every evening I sit down to watch Florida news at Six on channel 2. Florida has become a local on TV & FM up here! I stopped loogging these stations because they've become so routine. I agree with Eric Voytko-The CM 1110 is one awesome antenna. I was able to null local Ch 3 (WFSB) & pick up WEDU (in Florida, of course) Eric, if you are still looking for a list of TV stations order the 1991 Broadcasting Yearbook. I'ts as useful for TV as the The Elving Atlas is for FM. And as a bonus, it lists AM/FM by frequency -call etc. (Ed, your question about the R-7000 should be directed to the midwestern TV/FM DXers who use it swear by it, not at it and one DXer out there gets 600 mile daily troposcatter on UHF, I have not heard of the FRG-9600, but I could say that the R-7000 runs circles around it-B

this has been one of the most disapointing ES seasons in many years. When I noted the first opening on May 19 (MUF 5), It appeared that we might be off to a good start: but that was not the case. Aside from an excellent opening on July 19, it's been a real ho-hum summer.

The season picked up somewhat during the second half, but not enough to rescue it from the fate of being my worst season to date. Only "big" openings this year was july 1 tho June 26,29. July 2 & 19 were OK. I hope trops start picking up late this summer and this fall: not much of that so far either. 73's Greg

Dude from Joisey PO Box 2999 Clifton NJ 07015-2999

to be honest, this season was a stinker. On the 19th, when other members were getting short skip on 2-6 and Hi-band 7-12. I did see SOMETHING on channel eight. Normally Ch 8 here is New Haven CT and cannot be nulled out really. But I did see some cci on 8, I just assumed it was WGAL Lancaster PA (which by the way I never logged yet!) so I passed it by and didn't really thinkfurther of it until of course I had heard that there was hi-band skip that day. Bob Smolarek of West/Central Jersey did log Ch 3 from NC at only 450 miles or so! So that is it from here. Goodxing!!!!

Nice meeting all who had time to make it to the WTFDA convention at Bob Seybolds. Thanks to Bob Seybold for being such a great host. Dave

Harry Hayes continued from bottom of last page....

E-skip was quite good on 8/11, the last hurrah for a painfully disapointing 1991 season. As of 9/1, no trops of significance were noted on UHF or else where. A week of stifeling hot & humid weather at the end of August failed to produce any trops. A winter like cold front came in on 8/31 & bought winter like conditions as well on UHF. I hope this high weather system will become static enough and produce some high pressure trops. We still have 3 months really for some trops to develop.

November 1991 3 month cutoff Deadline Dec 8 1991

I am going back to using this much smaller type again as it saves space, but it does not look as good as the other one I was using for awhile. Before we go and finish the remaining reports from last month, lets take a quick look what happened 5 years ago this month.

Flashback to "Thanksgiving 1986." ..An incredible super tropo condition developed with loggings so amazing, that conditions even lasted into the broad daylight with several UHF stations on each channel. The following were culled from various VUDs. For you newer members, this is what it was like....Bob Seybold of New York said..... ..."Most channels several deep all the time. 1000+ miles with local quality strength. Many 800+ mile stations completely wiped out regulars.." Bobs logging's were like this.."....KCRG-13-MO (720 miles) on open terminals with(no antenna attached)..." Steve West of PA (near Philly) said..." The conditions on Thanksgiving weekend were incredible-like 10 ducts at one time, always changing strength and direction.." Harry Hayes of Wilkes Barre,PA remarked..."an E-skip opening on UHF.." What really was amazing were the two way paths that occured like Danny Buntin of Stillwater OK receiving ch 29 in Buffalo NY and Bob Seybold of NY getting ch 14 in OK not to mention also KBVO-42 of Austin TX at a totally amazing 1325 miles. Other top loggings included Rich Wertman of NY logging KGMC-34-OK at 1129 miles. Glen Jacobs of PA logging KTBO-14-OK at 1254 miles. Harry Hayes with a indoor dish logged WEEK-25 IL at 710 miles. To this day , many TVDXERs swear that this was the best opening ever. Well fellow DXERs here is November, will this happen again? Keep watching. Let this retrospective of "Thanksgiving 86" remind you that VHF/UHF dxing can really be trully exciting and will keep you on your toes for the next "Thanksgiving 86" .

UNID 6
(Note # 5)

Note # 1 Both of these UNIDs were running Love Connection, but not in parallel. Suspect ch 23 was KBSI-MO.
Note # 3 (No # 2 ?-BN) Tentative-all news program (not CNN or Headline News). W52AZ is supposedly with the All News Channel. 3rd LPTV state: that's 1 more than I ever saw from Wisconsin..
Note # 4 TBN, seems to beam the same direction as Evansville and Terre Haute.
Note # 5 Channel 3: PBS in $tereo. Probably WEDU. Channel 6 CBS Either WCIX or WCPX.

Comments: Should have probably tried FM harder during the 7/29 opening. Still need Illinois on FM & it shouldn't have been too hard to do that morning. Dunno why I can't find WTCT-27.. I've seen Memphis, Jackson, Paducah & Cape Girardeau, and on the 7/29 opening NWS station WXM49 (162.425 Mhz, licensed to Paducah but with antenna on WTCT's tower) was full quieting-into a 19" whip antenna.. So far..I've received one Illinois station (besides WXM 49!) on VHF/UHF: WYCC-20-Chicago, about as far away in Illinois as you can get! the July 30 ES was pretty good on FM. Was hoping for Cuba, and I did hear tone mixing with WCIX audio on the car radio while rushing home to DX..

First September ES, and just barely made it, it was gone by 0045! the e-skip seemed to hang in there later this year than in recent years. Maybe it was making up for the poor start to the season. there was some skip on Sun.Aug 11 at the convention, we saw WWAY-3 Wilmington NC. A lot of trops this time, but only one opening of real consequence (the 25th). Fort wayne (357) and Toledo , Ohio (255) have been showing up very frequently this summer. i will only report them from here on if they come in with a strong signal. thanks again to Bob Seybold for hosting the convention this year-we all had a good time!

Greg now reports from his Vacation spot in Hampton Beach NH August 17-24

Skip was seen Thurs evening 8/22 around 2200. KETS-2-AR popped over WGBH with a fundraiser. Also tentative WREG-3-TN on ch 3, coming in with WFSB's audio. CCI was seen up to ch 6, but no FM Es noted. maybe someone knows what some of the UNIDs are, presumably new translators; 33 or 34 With Boston Video Jukebox, excellent signal if it is fact a LPTV on 17 w/TBN, which I assume is Bangor from the listing printed in the May VUD. Also Spanish around 18-20 on a rotary dial TV, and the WCBB xltr on 23 or 24. Also noted on the road, 64 TBN in Albany is on the air, and there seemed to be a LPTV in Utica on channel 11. We were there for Hurricane Bob: quite a experience, spending a whole day in a shelter. after the hurricane, conditions were very dead, but gradually improved. I was amazed how strong Boston station on FM/TV got into Hampton, 25, 38 and 56 were imaging, 4 & 5 were very hard to null, and even the VJN was almost snowfree. 73's Greg

Equipment,
4 Bay UHF antenna monted on floor fire escape @ 28 ft AG, Winegard AC 4990 preamp, ArcherV-120 VHF ant in bedroom on 3rd floor (25AG), Archerotor for UHF, "Arm-strong rotor for VHF, Technika TVC-22 tuner, Ambassador 12" B & W TV (1978) several VCRs & assorted other junk.

Tropo begins its annual fall comeback! the opening of the 21st & 22nd was strange-nothing on the weather map indicated any hint of potential trops. I confirmed KDEB-27-MO by phone-turns out using TVG would have done no goog as a ballgame had delayed their late night schedule by about 2 hours! I had cci on 21 & 33 earlier that evening that was likely Springfield,too. All signals in this opening were rather wimpy (except KLRT-16, which was in color at times). Anyway, KDEB-27 is now the longest overland tropo I've seen! been a good month when one can log 3 new stations on the same channel as a local (27) after that local signs off (WRJA,WLOV,KDEB)

My mother bought an Ambassador 12" B & W TV at a garage sale-it turned out to have a really decent tuner in it for both VHF & UHF! I swapped her for it and will put it to the test Oct 6-11 when I will be staying a top Mt Cheala AL. This is not a DXpedition , but a vacation, so equipment will be minimal: the 12 " TV, a UHF 2-bay, a preamp and bunny ears. Hopefully, WCIQ-7 won't be too much of a problem . 73's John

Antennacraft P-5 @ 25 ft, (5 ft parabolic) w/ Antennacraft AP 7820 preamp, Antennacraft (VHF) CS-1000 @ 20 ft: RG-6U (two separate feeds), Archerotor, 13" Portland TV & Emerson VCR 754-VHS.

Notes: Even what seem to be quite dead conditions, the results with the new antennas are remarkable...especially on UHF. For example, I'm now consistently seeing 22 from Cookeville TN: along with many others from KY, AL & MO that were seldom in with the old Archer VU-160. Thanks to Doug Allen for the advice & special DXer price on the new gear.

CALL LETTER CHANGE for ch 27 in West Point MS..was WVSB now WLOV. WDBB seen after local WZTV signoff, but WDBB stayed on with "infomercials". the new LPTVs logged were right under my nose all the time, but I just never got them with the old set up. (Tom returns on the following page....-BN)

And Tom Bryant continued..

...W43AG in Hopkinsville, KY (70 miles) really gets out..on 24 hrs..mostly NEWS CHANNEL satellite feed but some local origination..always a small '43' logo superimposed in the lower right corner. Im really axious to see what this system will do when a good opening pops up! 73's Tom

-----Notes--- # 1 light snow, watchable. WT8AL IDs.-----# 2 25+ w th religous program. Suspect Marion IL. Not WEEK. ---# 3 15- CBC English w/satellite delay from CBLT. Ottawa/Mt. Laurier FM's coming in very well. Suspect Maniwaki PQ over Temagami ON. Certain station had a minus offset, there was slop from WANE (15+) however. Anyone have current offset information on Maniwaki?---------# 4 CBOT repeater w/plus offset. Obviously new.------# 5 Really was a open -ing to Rochester, Syracuse, Utica, etc. Funny what can creep in.----------# 6 Local fundraising. WINM xltr? -----# 7 A good reason to start bandscans at ch 14, even when you don't think there is anything to get. 14+ with Family feud. About 730 mi, new distance record for this place. (Nice going!-BN)

At 0900 on 8/29, CBLFT-25 was +21 khz off frequency, by signoff this had to increased 27.5 khz. this caused a similar drift in the repeaters as well. they were back to normal the next day. CBOT-5, McArthur Mills now has a zero offset As I write this (9/30), there seems to be some tropo activity after a stretch of no trops.

Here are some offset information for some allotments that are newer than the TV Data Base and for some stations whose offsets weren't given there, All Ontario

Chatham 64+
Cloyne 55-
Cobourg 27z
Hawkesbury 39-,48+
Kitchener 56+

For Ocean City: TMK-717 AM/FM/SW/ 2 " B & W TV, 10 element yagi beam like antenna, 75 ohm feed (for old pay TV station ch 50) hand held, with Armstrong rotor, no preamps.
Notes to report ---# 1 Most Ocean City loggings came and went as the weather fronts came through the area
---# 2 Was using my Regency MX-7000 scanner on whip antenna

Well, thats all for now. I hope to have my antennas back to normal soon. The VHF antenna is fixed one direction, dish is down, I got a new tripod, now just to fing time to put it all up again. 73's

(Ed Notes: Tom sent another report before this one, which I misplaced and unfortunatley I can't seem to find it sorry about that, but I recall Tom saying that his antennas fell down along with some shingles on the roof during a storm and hit his Mom's car I belive he said, correct me if I am wrong--BN)

COMMENTS: Except for an occasional Norfolk or Coastal MD opening in August, there was very little DX during the month. And, to repeat myself from last year, Washington, Baltimore, Hagerstown, Central PA, and a few other areas are so common that I do not make note of them in the logbook (e.g WFTY-50 is there virtually every night after local WNJM-50 signs-off). Otherwise, local LPTV W36AS New Brunswick, N.J. is on the air. It's schedule is Sunday mornings only. An hour or two of color bars, then some Indian programming for another hour or two, and then off. Generally by 1400, it's programming is done for the week!

(Note #1) : It's hard to tell this one apart from the TVO on 42 in McArthurs Mills -- however this opening was highly directional to the north while McArthur is to the northeast.

Comments: I've now moved into a house in Brampton. It's amazing how the Buffalo signals drop off so sharply only 8 miles furthur north. WNYB-49, which blasts in in Mississauga even creating an image on ch 34 ... has plenty of snow here in Brampton. Chs 2 & 4 are rather weak. Great for DX (ES esp.) ... however this is now a case where what's good for DX is not so good for regular TV viewing. I'll be putting up outdoor antennae by next summer.

73s, Bill

Dude from Joisey PO Box 2999 Clifton NJ 07015-2999
Nothing worth mentioning in the way of DX, It is mid October and the conditions stink. What else is new hi!

Editor's notes: About the absence of this column in the last two months, I have no apology. I sent my column (s) in time to HQ. The first time I likely got lost in the mail (I did send it in time.). Last month I sent ETVDX via next day air and the post office told me it got there in time on my deadline, the 20th, but the envelope was not taken until the 26th from the postal box! Can't blame me for that! So Im trying again, to send this column next day air, 2 days before my deadline, if this column doesn't show in November, again don't blame me, please.

Do blame me on the new look of ETVDX, I've used much smaller print and went to FOUR columns instead of 3 to save space and the 7 pages this month would have been 11 pages + under the old print type that I was using. Goodxing!-BN

November 1991

Deadline: 12-12-91
Cut-off: 09-01-91

This year's tropo season is the WORST IN HISTORY... that according to Jeff Kadet. From the lack of reports, it appears that has been the case. Only August 25th was reported with tropo out to 500 miles, as seen by Robert Kramer.

CORRECTION - Way back in August, several errors crept into William Draeb's report courtesy of your editor. The distance for CHSJ-4 should have been 1375 miles, not 1230. K69BA, Iron Mountain, carries The Disney Channel, not WBAY-2. And W69AV, Leeland, Michigan; carries WCML-6, not WCMV-27. According to Bill, W69AV can either pick WCML-6 up directly or via W46AD.

Once again, I would appreciate each translator logging including the primary. Hopefully, that will prevent me from erroneously listing the primary from an old source!

Not much DX seen with the recent cold snap that invaded this area. Last night I discovered my UHF setup wasn't working as it should (water in connections) and I fixed the problem this afternoon. I may have missed a little DX during the down time.

In very early July the Wards black & white TV use was discontinued as "vertical folding" at the lower edge of the screen became too severe to deal with (nothing like a few lost IDs that way!).

In spite of its annoying "blank-to-black" feature, the RCA color set had to be used as the DXing instrument for the rest of this month. So far, I've not been successful in any of my attempts at locating a schematic for it so that I might find a way of defeating that circuitry.

What I really need is a good CCTV black & white monitor to put the video output into from my old JC Penney (1976 tuner/1980 IF, etc.).

With our high temps in the 100s, many days the in-state tropo levels were so high that much of the E skip ended up being "buried" in it. Anyway, a few channel four E skip catches were IDed under our local.

The E skip MUF reached 144 MHz to the US southeast on July 18th and this time my 2 meter rig was in working order! (A very much briefer event in the same direction occurred the next day as well.)

Other "diversions" of the month included the failure of the central air conditioner compressor (less than a year old!) from June 28th to July 3rd (and having to install a 5000 BTU temporary window unit), the July 11th solar eclipse, and my 25 year high school reunion activities here July 12th to 14th.

By the end of the month, the KTV 12" black & white set was put on line as the DX instrument (the "blank to black" video feature of the RCA color set was causing too much DX to be "lost"). The black & white set has very poor selectivity, especially on high-band VHF, so it is not really considered "permanent". Though this was bought in July 91 (to "replace" the RCA as the video display for the Atari 8-bit computer system) the manufacture date has July 1988 on it!

August 18th had the Carolina stations with their live local/remote coverage of the effects of Hurricane Bob. Nice to catch a new channel 3 later in the month. A lot of August TV E skip considering the comparatively low levels of it in June and July.

More TV E skip this month considering the relatively low levels of E skip for the "main" part of the summer season.

The local LPTV K02MX pest had video loss for a day + this month. A few days after fixing that, it was then completely off for ten days (September 20-30). Four years of nothing but color bars with ID and test tone! That really stretches the definition of "... in the public interest ...."!

For several days I had been noticing faint CNN video under the LPTV in late August - an obvious indication of CATV leakage. The Bearcat XL-55 hand-held scanner with

Pat Dyer (continued) 149.75, 161.75, 167.75 MHz TV audio quickly verified this and where it was coming from! A couple of phone calls to Paragon Cable finally got a technician out who found the underground service feed to the immediate west neighbor (who'd only moved there in mid June) had been chewed into by their dogs. That was quickly fixed, and ironically, about two weeks later that entire system (with three or more "branch feeds") was relocated to the other end of their house!

Such cable problems pose a dual threat for me - not only QRMing my TV etc., but also presenting a point where my transmitted amateur signals could ingress into the CATV lines!

The skip on September 3rd was nice - had some beautiful IDs! Not much tropo to speak of lately. Had some brief tropo on August 13th in the evening and on September 21st around noon (strange time! - it was gone within an hour or so).

I believe I saw KTVI on the night of September 3rd. They were running local news with a black woman on the left and a white man on the right behind the news desk. In the back, it looked like a nighttime backdrop of St. Louis with the Arch. Can anyone confirm this news set for St. Louis? It would be another short-hopper for me.

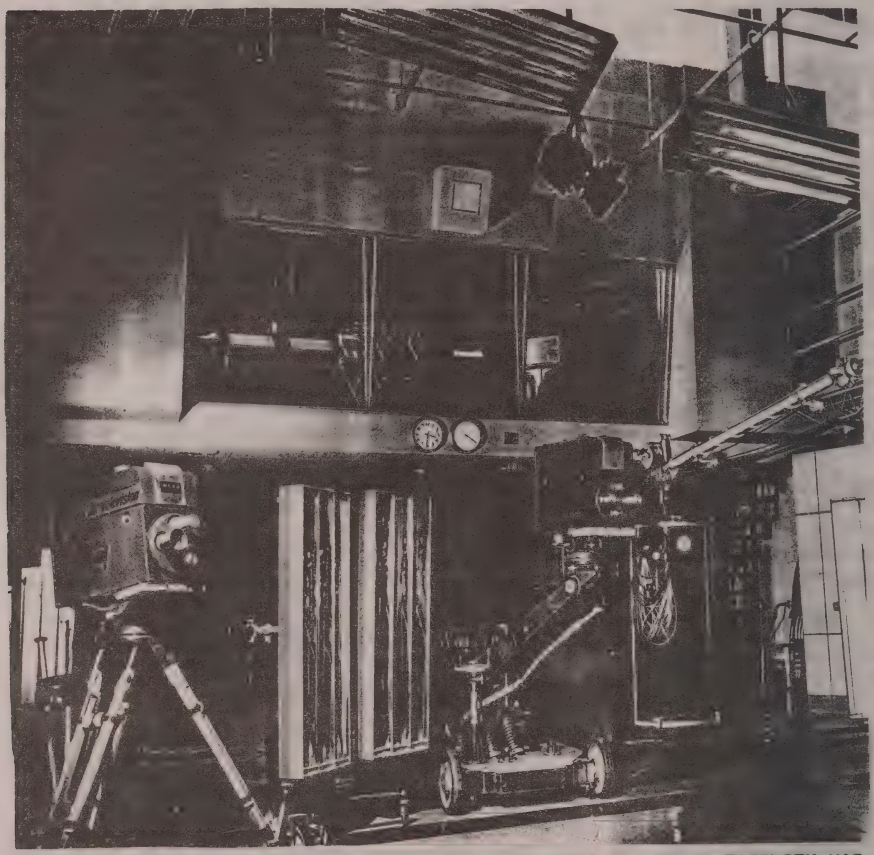
TV TIME TUNNEL

PREPARED FOR THE VUD BY TOM BRYANT; 849 TODD PREIS DRIVE; NASHVILLE, TN; 37221

Photos aren't used often in this column but I've made an exception here to present this pictorial history of WCAU-tv. Thanks to WTFDA-er Bill Burrows of Gloucester City, NJ for sending a copy of this feature from an old BROADCAST NEWS magazine.

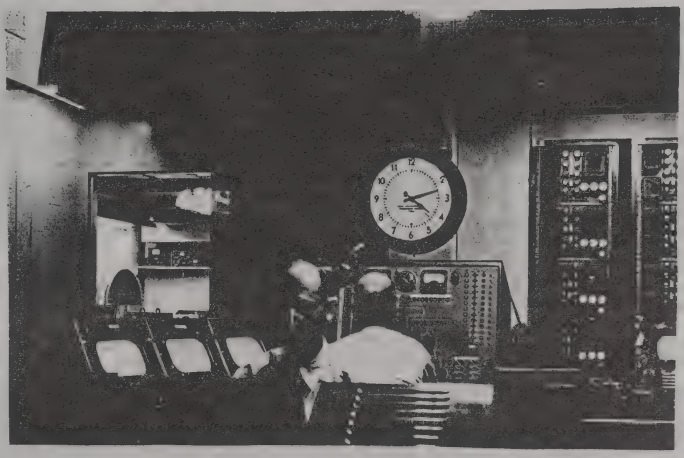
In 1946 channel 10 in Philadelphia was granted a construction permit as WPEN-tv, but as the result of an ownership transfer, became WCAU-tv prior to the May 1948 startup. It was the city's 3rd television station, and the second affiliate for the fledgling CBS Television Network.



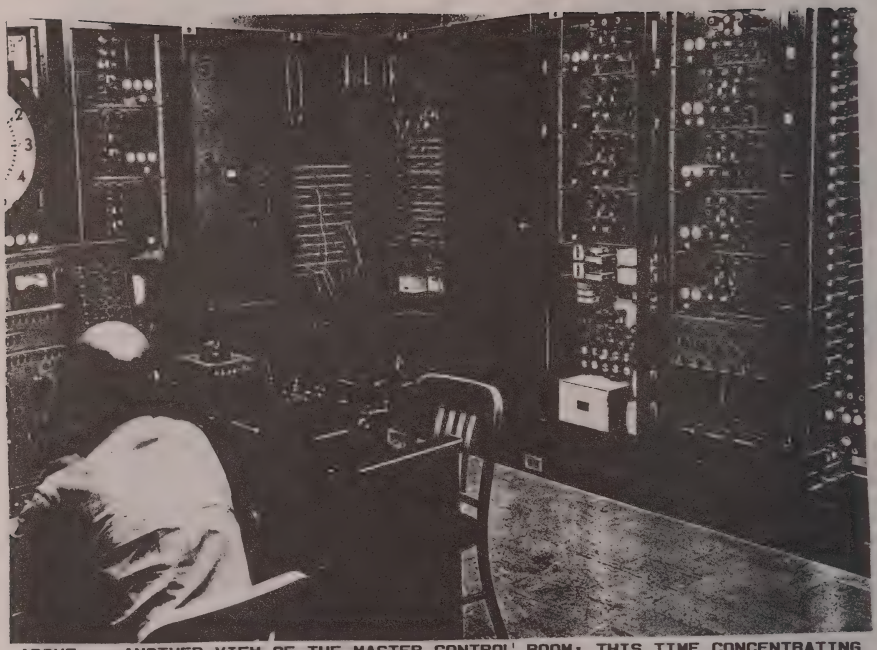
A LOT OF OUR READERS WEREN'T AROUND WHEN THIS SORT OF STUDIO FACILITY WAS STATE-OF-THE-ART; AND THOSE WHO WERE MAY NOT HAVE HAD A CHANCE TO SEE SUCH A SETUP. OF SPECIAL INTEREST IN THIS SCENE ARE THE ELEVATED CONTROL BOOTH FACILITIES (l-r rear of RCA audio console and 3 camera control units), THE LARGE LIGHTING PANELS, THE BOOM MIKE, THE RCA TK-31A CAMERAS (one on a wooden tripod, the other on a rolling boom), AND THE SPEAKER [sporting WCAU call letters] JUST BELOW AND TO THE RIGHT OF THE CLOCKS.

WHILE MOST STATIONS RAN TEST PATTERNS FROM SLIDES OR MONOSCOPE PICKUPS; WCAU-tv UTILIZED A FLYING SPOT SCANNER TO AIR THEIR TEST SIGNAL. SINCE CHANNEL 10 WAS CO-OWNED WITH A NEWSPAPER, EMPHASIS ON NEWS AND INFORMATION WAS STRONG. THE CAMERA TYPE AND PHYSICAL LAYOUT OF THIS PARTICULAR PATTERN PERMITTED INFORMATION TO BE CHANGED QUICKLY; EITHER BY INSERTION OF TYPEWRITTEN COPY (such as the date shown on top), OR LETTERED WITH A MARKER (such as the forecast). INTERESTINGLY ENOUGH, IT DID NOT MENTION THE CITY.

IN THE WCAU-tv CONTROL ROOM, ONE ENGINEER KEEPS AN EYE ON AT LEAST 3 OF THE 6 RCA CAMERA CONTROL UNITS, WHILE THE OTHER RIDES GAIN ON AUDIO LEVELS FROM ALL SOURCES. THE RACKS ON THE RIGHT ARE FILLED WITH TUBE - TYPE SYNC AND DISTRIBUTION ELECTRONICS.

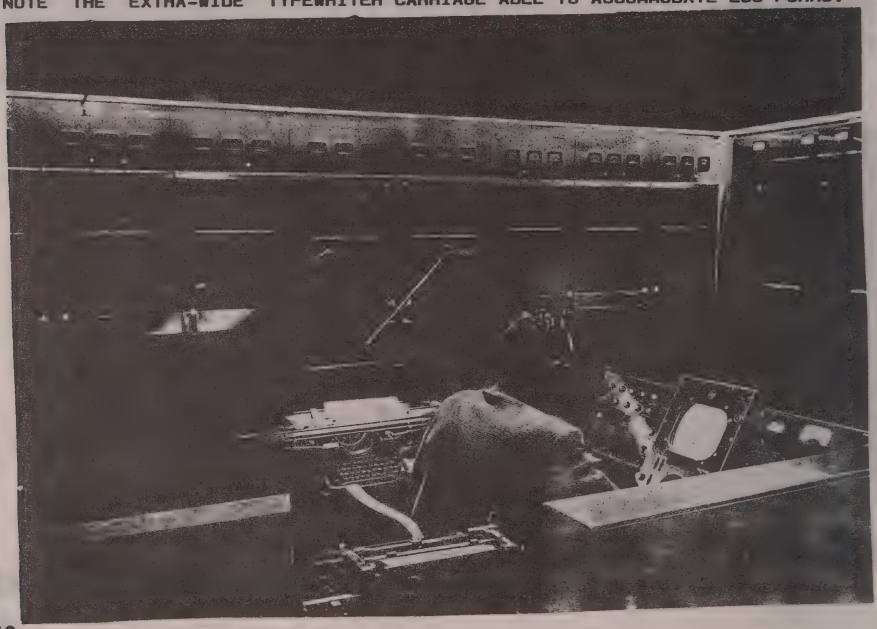


ALMOST ALL EARLY REMOTE UNITS LOOKED THE SAME. THIS ONE IS TYPICAL OF THE VINTAGE VANS. MOST OF THEM HAD ONLY ONE CAMERA, AND WERE STAFFED BY AN AUDIO OPERATOR, MICROWAVE AND VIDEO ENGINEERS, AND A CAMERAMAN. IF THE UNION WAS STRONG ENOUGH, THERE WAS ALSO A DRIVER. DUE TO THE LINE OF SIGHT TRANSMISSION OF THE MICROWAVE SYSTEM, IT WAS NECESSARY TO BE CAREFUL IN SITE SELECTION. THESE UNITS LOOKED A LOT MORE PRACTICAL THAN THEY ACTUALLY WERE.



ABOVE: ANOTHER VIEW OF THE MASTER CONTROL ROOM; THIS TIME CONCENTRATING ON THE ENORMOUS AMOUNT OF EQUIPMENT IN PRE-TRANSISTOR TIMES. FOR SAKE OF COMPARISON, IT'S LIKELY THAT MODERN COUNTERPARTS OF EVERYTHING IN THE PHOTO WOULD FIT INTO ONE RACK..WITH ROOM TO SPARE!

BELOW: THIS WAS ONLY PART OF THE WATER-COOLED RCA TT-5A TRANSMITTER. NOTE THE EXTRA-WIDE TYPEWRITER CARRIAGE ABLE TO ACCOMMODATE LOG FORMS.



THE CONTROL AREA CONTAINS TWO LARGE TURNTABLES DESIGNED TO HANDLE ACETATE TRANSCRIPTIONS. ON THE WALL IS A "WESTERN UNION" CLOCK. THESE WERE RESET AUTOMATICALLY WITH A PULSE FED ON A PHONE LINE; AND WERE THE INDUSTRY STANDARD. BEHIND THE WINDOW ON THE LEFT IS AN ANNOUNCE BOOTH WHERE LIVE, OFF-CAMERA VOICE-OVER ANNOUNCEMENTS ORIGINATED. THE AUDIO MIXING BOARD APPEARS TO BE AN RCA CUSTOM DESIGN. THE ROTARY PHONE AND MANUAL TYPEWRITER ADD TO THE MUSEUM-LIKE SCENE.

TV PROJECTION ROOMS WERE FASCINATING PLACES. THE PROJECTORS SHOWN HERE ARE RCA MODELS (which made a heck of a racket when in operation). ALTHOUGH A FEW OTHER FIRMS SUCH AS DuMONT, GENERAL ELECTRIC, EASTMAN, AND SARKES TARZIAN MANUFACTURED TV STUDIO AND TRANSMITTER EQUIPMENT; RCA WAS THE UNDISPUTED LEADER IN THE FIELD..AND ABOUT 80% OF THE STATIONS USED RCA GEAR EITHER EXCLUSIVELY OR EXTENSIVELY. STUDIO CAMERAS USED IMAGE ORTHICON PICKUP TUBES, AND TENDED TO 'BURN' IF LEFT ON ONE SCENE TOO LONG. THE PICKUP TUBES IN FILM CHAINS WERE USUALLY ICONOSCOPES OR VIDICONS; AND WERE NOT AS PRONE TO RETAINING UNWANTED IMAGES. MOST TV STATIONS USED BOTH SLIDES AND OPAQUES..AND THERE WERE NUMEROUS DEVICES TO PROJECT BOTH. SOME LARGE STATIONS EVEN BOASTED 35mm THEATRE PROJECTORS.

NWS NEWS

IN THIS ISSUE:
-The column finally returns!!
-NWS western style- a new reporter from Colorado!!
...and much more!

November, 1991

Matt Sittel
PO Box 21451
511J Wood Hall, NCSU
Raleigh, NC 27607
(919) 834-6053

Deadline: none
(read column)

Long time, no column, eh? Well, I seriously considered terminating NWS News permanently due to lack of support, but just when I thought that was it along came a few reports! So in the future this column will run on an as-needed basis, not the every other month schedule unless I receive enough reports to merit a column. Anyway, NWS News will be here, so if you have something to send, please do. On to the reports...

William R. Hepburn, 1211-1547 Mississauga Vly, Mississauga, ON L5A 3X8 Canada EDT

Equipment: Realistic PRO-2004, 12th floor balcony vert. dipoles w/20dB amp.

MAY 1991

21 tr	0746	VEU-671	162.550	ON	Harwood	81	WRC	Peterborough
	0920	KIG-60	162.400	VT	Mount Mansfield	350	NWR	Burlington
26 tr	0305	VBG	161.650	ON	Orillia	70	CMB	Toronto CGR // and o/161.65 Cobourg

JUNE 1991

20 tr	0130	VDQ	161.775	ON	Kingston	159	CMB	Cardinal CGR // 161.65 Cardinal

Comments: Vermont becomes VHF weather state #7! KIG-60 ID gave location as Mt.Mansfield (20 miles east of Burlington).

Regarding questions in the March VUD...WXM-49 ID did use Goreville as its location... WXJ-47 ID mentioned only the Akron-Canton studio location (I've seen its location listed as Cambridge, Caldwell, and Zanesville -- take your pick!)...TACAN=TACtical Air Navigation Omnirange. Similar to VHF 'VOR's on 108-118 MHz except they are used primarily by the military and give both azimuth and distance information to pilots -- but they have no voice broadcasts...As far as the 20dB amp -- I've always had the in-line amp directly at the antenna -- after an FM trap. 108-112 MHz reception suffers somewhat because of the trap but not too badly. (I'm so close to CFMX-96.3 I need an FM trap to get anything worthwhile, hi). Well, 73's for now, BILL

Charles Gauthier, 3260 Beaulieu, Brossard, PQ J4Z 2P7 Canada

Equipment: Realistic PRO-2002 scanner, homemade "log-periodic" scanner beam at 20 feet AG in parallel with a Realistic magnetic mounted mobile antenna (20-012) on the roof (15 feet AG), 10dB amplifier.

JULY 1991

21 tr 0100 WXL-38 162.475 NY Binghamton 265
Very clear audio; forecast for central NY, the Adirondacks and the Mohawk Valley. Marine forecast for Lake Ontario and the St.Lawrence river. Hourly conditions.
0130 KHA-53 162.400 NY Rochester 261
It was under KIG60 Burlington,VT for half an hour and it finally destroyed it almost completely. (Awww!,hi-mcs) Hourly conditions in Rochester.

This opening was so strong that CJOH-8 Cornwall,ON was totally wiped out by WROC-8 Rochester, NY by antenna as well as on cable. 73,Charles

Doug Allen, PO Box 5646, Woodland Park, CO 80866 ---NEW REPORTER!---

Equipment: Regency Z 30, "NOAA 5" at 30' fed with coax, Ham M rotor.

6 tr				
0712	WXL67	162.550	NE	Scottsbluff 221
0720	WXM53	162.400	CO	Sterling 126

(Doug, is Sterling 126 or 155 miles?-mcs)

I've been threatening to send a report and finally have one! I've got local stations on .400, .475, and .550 and nothing on the other freq's, to my knowledge, for hundreds of

miles, so DXing with a quarter wave whip was out of the question. So, I finally designed a 5 element yagi (from the ARRL VHF Manual) cut for 162.5 MHz. I built it from the parts left over after putting an FM-13 together from two FM-10's. I'll try to get an article on the construction submitted to VUD sometime soon. In the meantime, anyone who has "remanufactured" the FM-13 and has the leftover parts, can throw this yagi together very easily. Send me a SASE for the construction details. Many other FM and TV antennas can also be reworked into a NOAA weather yagi.

I'm not absolutely sure of the calls of some of the above. (I filled them in for you, Doug.-mcs) Greeley and Sterling simulcast with both calls announced. They both run 300 watts. I can only get Sterling with tr enhancement to the NE whereas Greeley is fairly strong to the north all the time. Also on 162.550, KEC76 and WXM61 both simulcast to my north all the time. (Did you mean WXM51? WXM61 is in Lander,WY and is on 162.475. My list shows WXM51 Longmont // WXM56 Denver.-mcs) I assume I'm only getting the nearer station at Stapleton Airport, Denver, but have no way of knowing for sure. The tr of 8/31 points out one of the deficiencies of my cheap scanner. When Cheyenne and Merriman were similar signal strength to my locals, as they were this morning, I get both stations at the same time due to the poor capture ratio. It's hard to pick out the calls that way! The Regency Z 30 also has poor sensitivity. About 18 months ago I had a Yaesu FT 73 two meter HT that covered NOAA weather. It was more sensitive with its rubber ducky than the Regency with a quarter wave whip! I could sometimes get Pueblo on 162.400 with it. Don't remember the calls. (WXM52. But Doug mentions in his letter with the September trops that Pueblo is off the air.-mcs)

Matt Sittel, NWS News Editor. Raleigh, NC DX:

I've shortened my report to basically listing how many times I have received each station in 1991. This is a much shorter way to catch up on my reporting, but less informative.

WXL59	162.475	NC	Rocky Mount	66	53	Comes in often under WXL50 Fayetteville-local.
KHB31	162.550	NC	Wilmington	116	38	Comes over WXL58 Raleigh from time to time
WXL42	162.400	NC	Winston-Salem	88	37	
KEC95	162.400	SC	Myrtle Beach	123	26	
KEC84	162.400	NC	New Bern	104	21	This is rarer than Wilmington, for some reason
KIG77	162.475	NC	Cape Hatteras	187	9	Came in a lot during the summer
WXL60	162.475	VA	Roanoke	124	7	Comes in with WXL42 usually
KHB37	162.550	VA	Norfolk	156	4	Hard to get over the local
KHB29	162.550	SC	Charleston	200	4	Much easier to null local to log
WXM57	162.400	VA	Heathsville	195	2	Rare-trops have to be good for this one
WXK65	162.475	VA	Richmond	142	1	Seems to have a hard time getting past WXL50/59
WXJ20	162.400	SC	Columbia	173	1	Very rare-it is a great-tropo indicator

I'm back living in the dorms again, so signal loss is a problem. I was getting Myrtle Beach rather weak one morning with my scanner in the window, a north-facing one at that. When I took my scanner to a south-facing window nearby the signal was near local strength! Just what I feared, though there isn't much I can do about it. The above listings go through October 5.

OTHER NOTES: I have lots of NWS stations on tape that I recorded while traveling. I taped just about everything I could get to and from the WTFDA Convention in Dunkirk,NY. But my favorite has got to be KBA99 from Honolulu,HI, taped in March. It is a very unique station because this one station covers the entire state through a network of repeaters, and has lots of information about marine data. Weather isn't that much of a priority in Hawaii(the newscast on KHON-2 gave it about 30 seconds at the very end of the newscast!) so you'll not hear much about a forecast, but there is tons of buoy data, wave information, etc. If you'd like to hear it, let me know!

As I mentioned at the start of this column, this will appear on an as-needed basis in the future. For awhile it seemed that I was the only one who had anything to report, and that was why I let the column go. Then I got a few reports and decided I should go ahead and type them up. Now if I don't get any more reports, this is the last column. But if I do get reports, then there will be a column. So in the future you may or may not see NWS News in the VUD. But it is here if you have something to send in.

I noticed awhile back that WXL60 Roanoke,VA switched back to 162.475, after being on 162.400 for about 3 years, I believe. The difference seems to be in coverage area. When they were on .400 they put a nice signal into Wytheville, about 75 miles WSW of Roanoke. In addition I rarely ever got them in Raleigh. Now that they are on .475 there is no signal at all into Wytheville yet I get them every once in a while in Raleigh, much more than ever before. I have no idea ifthe transmitter site has changed, but there is a change in coverage area.

Did anybody get any NWS Es this summer? I checked, hoping that with all the short FM I had maybe I would get something but I didn't. I may or may not be in Raleigh next summer; I graduate in May of 1992 and I'm not sure where I'll be after that. It is likely that I will go to the University of Oklahoma for graduate school, though. 73's *Matt*

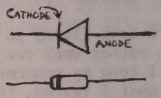
(For the record, my sources show the call letters for channel 46 in Milwaukee to be W46AR. Do they use W46AS on the air? fm)

ANOTHER SUPERTUNER III MOD! by BILL NOLLMAN

One additional modification to the Pioneer SuperTuner III is possible.

By adding a 1N914 (or any small signal diode) to the main PC board in the D514 holes the FM tuner will tune in steps of .05 MHz!

D514 is located under the tape section which must be removed to install the diode. Just make sure the band on the diode (the cathode) faces left (as marked on the board).



You can buy the diode at Radio Shack (or at any electronic parts shop) in a pack of 50 for $2.

On the foil side of the board (the green side) the holes for D514 is labled ES - likely European Standard. Or Extra Steps, or...

When the mod is done the display will look like → 103.5s

Also affected will be the AM tuner - now switched to 9 kHz steps. PUTTING IN A SWITCH TO "UNPLUG" THE DIODE WILL RESTORE THE AM IF NECESSARY.

Good luck to any who try this as always.

DIGI-KEY NOW HAS 110 KHZ I.F. FILTERS IN STOCK!

DIGI-KEY OF MINNESOTA (701 Brooks Ave. South, Thief River Falls 56701-0677) now has the 110 kHz FM ceramic filters in their inventory and they are shippable now with no back orders.
